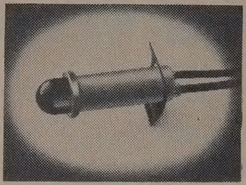
OMNI-GLOW PILOT LIGHT



For use on instrument panels, appliances, switchboards, all electrical and electronic apparatus, OMNI-GLOW will last in excess of 10,000 to 25,000 hours of operating life.

With built-in glow lamp and current limiting resistor, all mechanical spring contacts are eliminated, providing a cost-saving, rugged unit relatively free from failure due to vibration or shock.

Easy mounting — only a $\frac{1}{2}$" hole required for any panel thickness. Instant fastening — speed nut assures permanent shock and vibration-proof attachment.

Drawing less than 1/10 watt at 115 volts; long life, high reliability operation is provided over the 75-150 volt range; can also be used at higher voltage with decreased life.

Nylon body and acrylic lens assembly is $1\frac{15}{16}$" long overall. Lens extends $\frac{17}{32}$" in front of panel. Black plastic (105°C) leads are $4\frac{1}{2}$" long, stripped and tinned $\frac{1}{2}$".

Four standard models have red (Model #1010A1), clear (Model #1010A2), amber (Model #1010A3), or white translucent (Model #1010A4) lenses.

Furnished complete with lamp and speed nut, OMNI-GLOW is UL approved—CSA Approval No. 13346.

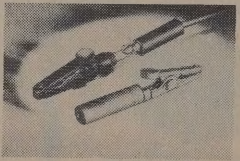
SAFE-T-KLIP

(U. S. Patent 2,754,490)



New convenience and safety are realized through the use of 100% insulation on these test clips. Tough nylon insulation covers the entire clip, including the nose, without the bulkiness of rubber boots or insulating tape. Danger of short circuit due to clips touching each other or other components is eliminated, and test leads may be changed from one connection to another without cutting the power in the equipment.

Available in pairs (one red, one black) SAFE-T-KLIP incorporates a cadmium plated steel alligator clip and provides shock-proof, short-circuit proof operation in excess of 600 volts. Width of the clips is $\frac{3}{8}$"; maximum height is $\frac{5}{8}$".

Four models are available. The #1410A is for use with a wire lead and provides either a soldered or screw terminal connection. The nylon sleeve is threaded to the clip for easy connection: Overall assembled length is $2\frac{13}{16}$". The #1410B, with overall length of $2\frac{11}{32}$", provides positive clip connection to all standard (.081 dia.) phone-tip test prods. The #1410C has a jack for standard banana plugs and an overall length of $2\frac{1}{16}$".

The 1410D is similar to 1410B except that the entrance hole is modified for Signal Corps. application.

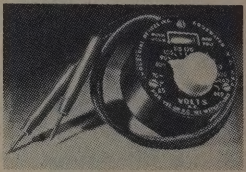
MINI-VOLT VOLTMETER

(U.S. Pat. 2,644,134)



MINI-VOLT is an "abuse-proof" voltmeter, sufficiently accurate to indicate a 2 or 3 volt drop on 110 volt line. Virtually burn-out proof, this rugged unit is used by electricians, radio and TV repairmen, refrigeratior and air conditioning servicemen, experimentors, lab technicians, handymen.

MINI-VOLT has wide application for all equipment whose proper operation requires correct voltage.

In addition to measuring the exact voltage over the range from 65 to 660 volts, Model #400B is used to identify AC or DC lines, check rectifiers, filter capacitors, chokes; test for blown fuses, grounded components, DC polarity, measure voltage drops with load, and 1001 other uses.

For use on AC (any frequency) or DC, MINI-VOLT, with an impedance of approximately $\frac{1}{2}$ megohm, draws negligible current and can therefore provide dependable voltage readings even on circuits used in electronic apparatus.

Will provide a lifetime of service — glow lamp is guaranteed for 25,000 hours of actual operation. Furnished complete with extra-heavy insulated 12-inch flexible test leads and test prods.

Lightweight impact resistant case and dial panel, thoroughly insulated. So rugged that instrument can be thrown into tool box or dropped to floor without damage. C.S.A. approval #8910.

ATR Portable Inverters are light-weight plug-in units for applications as recommended above. These Inverters feature instant starting, frequency stability, and high efficiency and reliability. Inverters have partial RF filtering which is only suitable for small insensitive type radios. For sensitive radio sets, ATR Universal Inverters, catalog sheet 657U, must be used. The 6 and 12-volt units are equipped with cigarette lighter cord set to plug into dash receptacle; whereas, the other higher input voltage units are equipped with standard two-blade plug-in cord sets. With ATR Inverters the need for special equipment is eliminated. They are designed for quiet, long-life operation. All ATR Models indicated are equipped with ATR plug-in Inverter Vibrators. Models RME and RMF come equipped with a four-point voltage regulator which makes possible the correct output voltage for minimum to maximum loads. The battery current consumption required is normally less than that drawn by one ordinary automobile headlight. The operating efficiency is approximately 75%. To figure battery current consumption see catalog sheet 657U. These Inverters are recommended only for use with loads having power factors in excess of 80% and should be used only for the applications as outlined above and on the reverse side of this sheet. **These Portable Inverters are not recommended for tape recorder operation, except as specified in (2) below.**

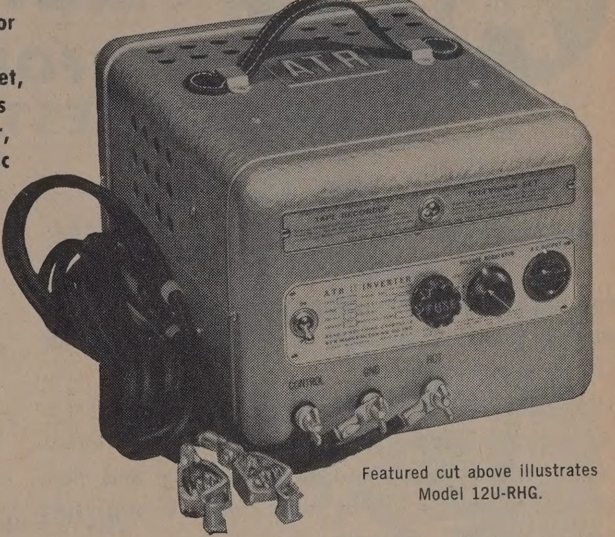
ATR UNIVERSAL INVERTERS

Specially Designed for Operating Standard A.C. Tape Recorder, Television Set, Dictating Machine, Radio Set, Ham Gear, Public Address System, Amplifier, Record Player, Electric Razor, Food Mixer, Vacuum Cleaner, Sewing Machine, Business Machine, Electric Drill, Fluorescent and Incandescent Lamp, and Electronic Test Equipment from D.C. Voltages in Automobiles, Buses, Trucks, Boats, Trains, Planes, and D.C. Districts. Ideal for Emergency Lighting Applications for Civil Defense, Red Cross, Rescue Work, etc., Simply Using Extension Cords.

ATR Universal Inverters are actually a combination of 4 Inverter designs in one unit! These Inverters are especially recommended for applications as mentioned above and feature complete RF frequency interference suppression, instant starting, frequency stability, and built-in power factor corrector utilizing a simple toggle switch. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation at high efficiency and maximum reliability. All models indicated are equipped with ATR heavy duty plug-in Inverter Vibrators. These Inverters also come equipped with four-point voltage regulator which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. To figure approximate current consumption from storage battery, divide the rated input wattage of the recorder (or load) being operated by the storage battery voltage and further divide this answer by .75 which will give the actual current consumption based on the actual load and efficiency. The battery current consumption required for a tape recorder is normally less than that drawn by ordinary automobile headlight(s). These Universal Inverters are recommended only for use with loads having power factors in excess of 70%.



Featured cut above illustrates Model 12U-RHG.

ATR Inverters should be used only for the applications as outlined.

ELECTRONICALLY REGULATED D.C. CONSTANT VOLTAGE POWER SUPPLIES

RELAY RACK MOUNTING TYPES $52.50

MODEL 1-BK (BLACK RIPPLE FRONT PANEL)

MODEL 1-GR (GRAY RIPPLE FRONT PANEL)

Input: 105-125 volts AC. 50-60 cycles.

DC Output Voltage: Continuously variable from 200 to 325 volts DC for load currents 0 to 100 ma.

Regulation of DC Voltage: Better than 1% for loads of 0 to 100 ma. and line voltage variations from 105 to 125 volts.

Ripple Output: Less than 10 millivolts rms.

Isolated Output: Both positive and negative sides of the output are isolated from ground. Either side may be grounded or the output may be left floating.

AC Output for Filaments: An isolated AC voltage of 6.3 volts AC at 3 amperes is available at the output terminal connections.

Overload Protection: A fuse mounted on the front panel protects supply against external overloads or internal failure.

Input and Output Connections: All input and output connections are made to a single terminal strip conveniently located on the rear of the chassis.

Dimensions: Standard 19″ relay rack mounting. Panel width: 19 inches; Panel Height: 5¼ inches; Depth Behind Panel: 7¼ inches.

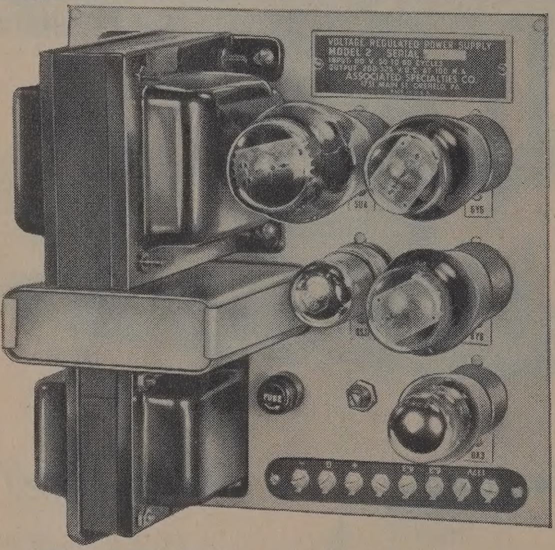
Cabinet Finish: Standard Black ripple enamel.

Controls: Rear Chassis—DC output voltage control. Front Panel—Pilot light, input power switch, and fuse.

Weight: Net weight is approximately 20 pounds.

High Quality Components: Only components of the highest quality are used in this equipment insuring you years of trouble-free dependable operation.

Accessibility: By removing two small screws, the front panel may be removed while the supply stays mounted on a relay rack or cabinet. This allows quick and easy inspection.



MODEL 2 SUB-CHASSIS MOUNTING $49.50

Sub-chassis mounting type regulated power supplies are designed to save space and money. They can be mounted on a chassis along with other components and thereby save space which would be used by a relay rack mounting supply. Savings are made in the size and cost of the cabinet required for a job along with the lower cost of the sub-chassis mounting supplies.

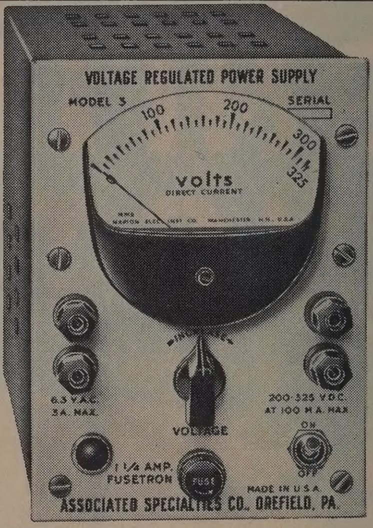
SAME AS MODEL 1 EXCEPT

Dimensions: 9″ wide, 8¾″ long, 4¾″ high above chassis, 1¾″ clearance required below chassis. Size of cut-out required, 8¼″ wide x 8″ high. Location of four mounting holes: 8⅝″ wide x $8\frac{11}{32}$″ high.

Chassis Finish: Aluminum.

Controls: DC output voltage control adjustable from the top side of the chassis.

Weight: Net weight is approximately 14½ lbs.



MODEL 3 CABINET MOUNTING $69.50

An ideal unit for bench work or assembly into equipment.

SAME AS MODEL 1 EXCEPT

Input Connections: A line cord at rear of cabinet.

Output Connections: 5 way binding posts.

Dimensions: 5″ wide, 7″ high, 16″ deep.

Panel Finish: Aluminum.

Cabinet Finish: Gray enamel.

Controls: D.C. output voltage on front panel.

Meters: Output voltage.

Weight: Net weight is approximately 20 pounds.

MODEL P2 PANEL $9.00

Mounts two Model 2 or 12 power supplies side by side in a 19 inch relay rack space 8¾″ high.

OBSOLETE TYPES

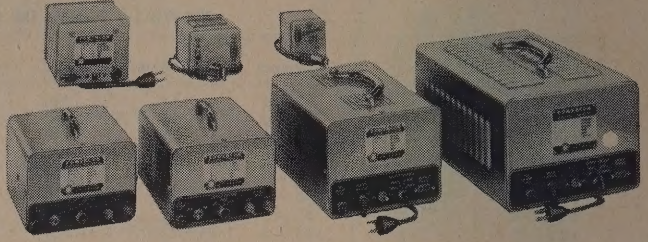
It is entirely impractical to continue to stock the hundreds of different heavy-duty vibrators that have been supplied in past years for a large variety of uses. Every attempt is made to maintain equipment in service, even though it originally used vibrators which have generally become obsolete. Some obsolete vibrator types are still carried in limited stock at the factory. In a great many cases, simple instructions are available so that a radio technician can change wiring, sockets, or other minor features in an old design to adapt it for use with new standard vibrators.

For information regarding a possible replacement for obsolete vibrators, send details including model number of equipment, original vibrator type number, voltage and frequency to the CDE Vibrator Department, Fuquay Varina, N. C.

POWERCON®

Vibrator and Solid State

POWER CONVERTERS



POWERCON CONVERTERS listed here provide 115v AC 60 cps output from batteries or other direct current sources such as 110v DC power lines and local generator plants.

Principal applications of these converters are the operation of television sets, radio receivers and transmitters, record players, shavers, tape recorders and dictating machines. Also, portable alarm systems, portable test equipment, portable hand tools, safety equipment, photo-electric systems, and certain small motor-driven appliances.

Maximum continuous-power ratings range from 150 VA for 6v input, 250 VA for 12v, 24v and 32v inputs, to 400 VA for 110v and 220v inputs. Much higher outputs are possible on intermittent duty-cycle operation. These output ratings are conservative, assuring highly reliable operation with extremely good life characteristics.

For operation of mobile radio transmitter-receivers and similar equipment, a group of DC input to high-voltage DC output POWERCON Converters is also listed.

Various mounting kits, wire lead kits containing various lengths, fuse kits, and remote control kits, are available for aiding the user in the proper installation of these POWERCON units.

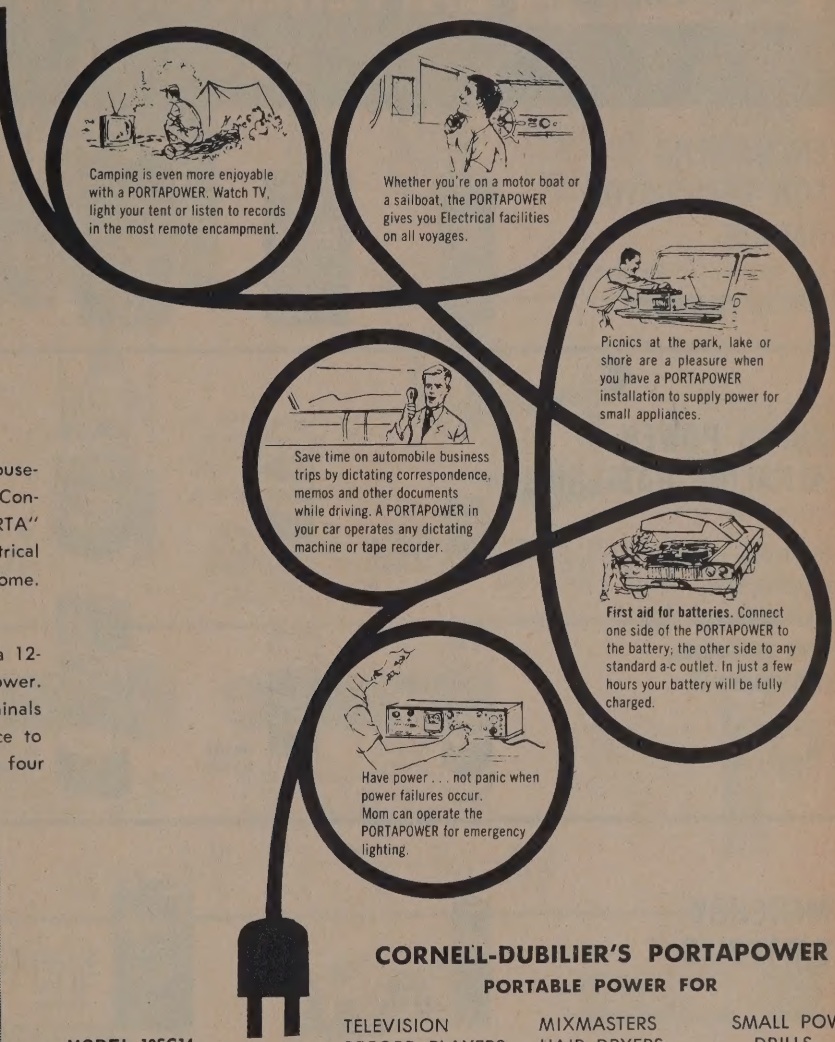
The PORTAPOWER® converts the power of a 12-volt storage battery to standard household power. Connect the battery leads to the proper terminals on the unit; then plug-in any 117-volt device to the output receptacle. Now you have up to four hours of available a-c power.



Camping is even more enjoyable with a PORTAPOWER. Watch TV, light your tent or listen to records in the most remote encampment.

Whether you're on a motor boat or a sailboat, the PORTAPOWER gives you Electrical facilities on all voyages.

Picnics at the park, lake or shore are a pleasure when you have a PORTAPOWER installation to supply power for small appliances.

Save time on automobile business trips by dictating correspondence, memos and other documents while driving. A PORTAPOWER in your car operates any dictating machine or tape recorder.

First aid for batteries. Connect one side of the PORTAPOWER to the battery; the other side to any standard a-c outlet. In just a few hours your battery will be fully charged.

Have power . . . not panic when power failures occur. Mom can operate the PORTAPOWER for emergency lighting.

HIGH VOLTAGE POWER PACKS

COMPACT "M" SERIES 2 TO 75 KVDC

The "M" series Power Packs are a completely new design. Long life and a small package directed the use of the latest techniques and advanced materials. Many features have been incorporated with the highest quality materials, at the same time maintaining economy of cost.

Input line voltage standard is 118 volts 50 to 500 cycles per second. Also available as a standard is an input voltage of 230 volt input, at 50 to 500 cycles per second. For a 230 volt input, add suffix A to the part number. All items can be modified for input voltages over a wide range as a special type.

The output is filtered DC and standard potentials and current ratings are listed below. All units can be modified for any required potential and current below the values specified in the listing. The output potential can be varied from zero to the rated voltage and load by means of a variable auto transformer at the primary.

Design life is 40,000 hours at 35°C and 5,000 hours at 85°C.

Case finish is light blue gray lacquer per MIL L 7178.

All units except the 75 KV, have two output terminals isolated from the container, permitting either terminal to be operated from ground if an intermediate point between them is tied to ground. The 75 KV unit has a single high voltage terminal for the output. The Power Pack is normally furnished to deliver a positive output potential relative to ground. If a negative output is desired it can be shipped as such from the factory upon request. The polarity can be easily reversed as required by opening the top access port and reversing the selenium rectifier board. The remaining output terminal at low potential is left ungrounded so that the load current be monitered if required.

Makes your DC voltage problems easy. Just wire in the two input and output connections and you are ready to operate. New patent applied for features, greatly improve reliability. Service if it should ever be required is a matter of minutes to unscrew the old top and replace with a new element. Newly designed H.V. transformer has special insulation for trouble-free performance. Output is completely isolated and either post may be grounded or operated as a floating supply. DC is filtered for 5% or less ripple. Output may be varied from full ratings down to zero by simply inserting a small Variac in input. All units rated for 5 Ma. current. Power packs 7.5 KV and higher have slightly modified construction. 115 volt, 60 cycle input. Zener regulated models offer closely stabilized fixed output voltages against line or load changes. Twenty output terminal taps enable selection of any regulated voltage.

LOW VOLTAGE PACKS

Now take advantage of the same type of design in your low voltage, high isolation circuit requirements. 10,000 Volts insulation to ground. All utilize Silicon rectifiers and finest filtering networks. Input 115 Volts, 60 to 400 Cycles.

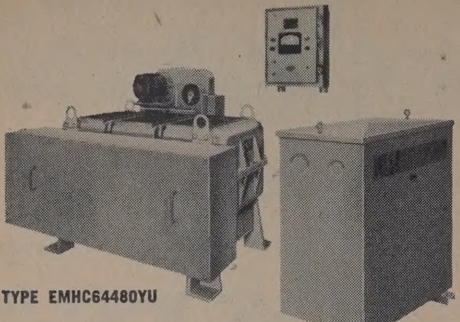
STABILINE® automatic VOLTAGE REGULATORS



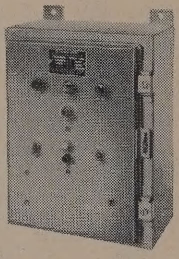
TYPE EMHC64480YU

EMHC series

For heavy-duty applications to 480 KVA. Feature zero waveform distortion, efficiency as high as 99%. Patented re-entry rings and helical coils on variable transformer component permit extremely fine voltage adjustment with very low voltage drop.

DC Regulator Control

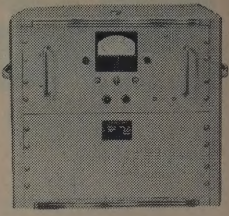
Provides automatically regulated d-c voltage adjustable from 25 to 100% of maximum with an input variation of ±10% in a-c line voltage at 50/60 cycles. Accuracy is ±1% of 100% voltage setting. Designed for use with a motor-driven POWERSTAT Variable Transformer and associated d-c components supplied by the user. Supply can be from either a single-phase full-wave or a 3-phase full-wave unfiltered source. Error detection requires either 1 milliampere, 300 kilohms or 10 milliamperes, 15 kilohms supplied from the d-c output.



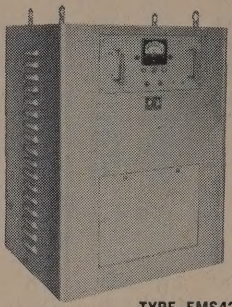
TYPE CB5001

EMT series

Electro Mechanical Transistorized types in ratings from 2 to 100 KVA. Control circuit is completely transistorized. Speed of response sufficiently fast for most applications.



TYPE EMT4115



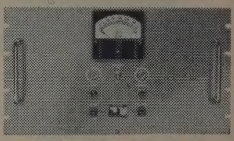
TYPE EMS42100

EMS series

Electro Mechanical Transistorized types for single or three phase duty with ratings from 25 to 275 KVA. Several types available with individual line control for greater application flexibility.

EMK series

Electro Mechanical high speed, high accuracy assemblies in ratings of 2.5/5.0 KVA. Accuracy ±1.0% of nominal output voltage.



TYPE EMK4105R

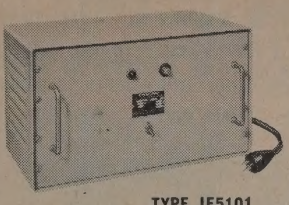
IE series

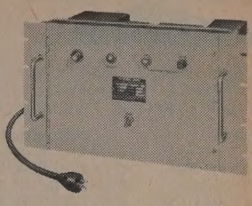
Instantaneous Electronic types have no moving parts. Hold output voltage to within ±0.1% for wide line variations, within ±0.15% for any load current change or power factor change from .5 lagging to unity.



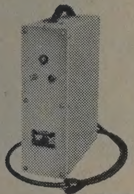
TYPE IE5101

TM series

Tubeless Magnetic types have no tubes, transistors or moving parts. Response time for ordinary line and/or load changes is within ½ second; accuracy is within a 1.0 volt bandwidth. Waveform distortion is 4% or less.



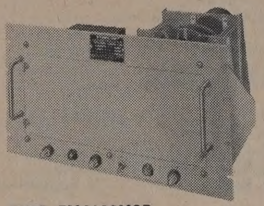
TYPE TM7101R



TYPE IET51002

IET series

Instantaneous Electronic Transistorized types in ratings from 0.25 to 1.0 KVA. Output voltage remains within a 0.5 volt bandwidth for any and all variations in line voltage, load current and load power factor.



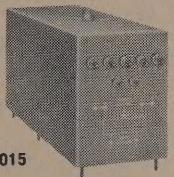
TYPE EM4108MCR

MILITARIZED

Standard Instantaneous Electronic, Electro Mechanical and Electro Mechanical Transistorized types that meet requirements of applicable military specifications. Type EMTH41007MH is 3½ x 6 x 4½″; others fit standard 19″ relay rack.

MR series

Provide the constant RMS voltage required to maintain proper tube filament temperature. Response time will not exceed 0.6 second under most adverse line or load changes.



TYPE MR6F015

400 CYCLE

Instantaneous Electronic types in ratings of 1.0 and 5.0 KVA. Maximum waveform distortion is 3.5% under all input line and most load conditions. Other 400 cycle types listed under MR Series and Militarized types.

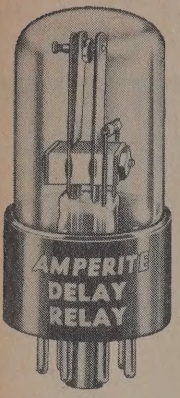
THERMOSTATIC **AMPERITE** DELAY RELAYS

GLASS ENCLOSED • HERMETICALLY SEALED • A.C., D.C., OR PULSATING CURRENT



STANDARD

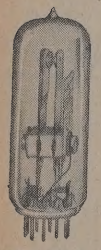
AMPERITE THERMOSTATIC DELAY RELAYS

Amperite Thermostatic Delay Relays are actuated by a heater . . . can therefore be used on A.C., D.C., or pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions. **REPLACED AS EASILY AS A RADIO TUBE.**

CIRCUITS SPST: Available only — normally open or normally closed.

HEATER VOLTAGES AVAILABLE: 2.5, 5.0, 6.3, 12.6, 26, 50, 115V. For 220V use a 6500 ohm-5 watt resistor in series with 115V heater.

HEATER WATTAGE: Standard and Miniature Relays—all voltages—2w prox. All heaters may be operated continuously. Heaters will not be damaged by a 50% voltage overload for duration of 1 hour or less.



MINIATURE

VARIATION OF DELAY WITH HEATER VOLTAGE

FIGURE 1 — Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in this diagram.

For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

CONTACT RATING

	Delay	Contact Rating Non-Inductive	DC Voltage Breakdown Contact-to-Contact	DC Voltage Breakdown Heater-to-Contact
STANDARD	2 to 10 Sec.	115V — 3a AC	250V	500V
RELAYS	15 to 180 Sec.	115V — 3a AC	800V	800V
		220V — 1a AC	800V	800V
MINIATURE	2 to 10 Sec.	115V — 2a AC	250V	500V
RELAYS	15 to 180 Sec.	115V — 2a AC	800V	800V
		220V — 1a AC	800V	800V
FLASHERS		—½a AC	250V	500V

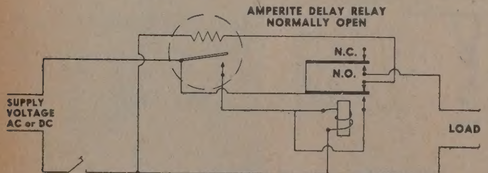
AMBIENT TEMPERATURES: Relays are compensated for temperatures of — 55° to + 80°C. (Relays can be operated from — 80°C to + 125°C without damage). Ambient temperature tolerances depend on type. Low voltage heaters 26V or less have better ambient compensation than relays with 115V heaters. If the relays are actually to be used over ambients of — 55°C to + 80°C it is advisable to have each relay tested at the factory over the ambient. A nominal charge is made for this service.

DELAYS AVAILABLE: From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay can be increased up to 50% by using a resistor in series with the heater. Relays with short delays such as 2 to 5 seconds can be increased 100%.

CONTACT DROP: —0.1V — Prox. at 1A.

LIFE of any individual relay will depend on the service the contacts are subjected to. With a 115 V. — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations. SHELF LIFE of Amperite Delay Relays is over 10 years.

INDUCTIVE A.C. LOADS: When breaking an inductive A.C. load, use a condenser of .01 to .1 mfd. across contacts.



INSTANTANEOUS RECYCLE: This can be obtained by using a normally open Amperite Delay Relay in conjunction with a DPDT Magnetic Relay as shown at left. If normally closed is required — use a **normally open** Amperite Delay Relay — and use the NC contacts on the magnetic relay. Choose the Amperite Delay Relay for the voltage required and the delay required (e.g. — 115N030 — would be used on 115 volt supply — for a 30 second delay).

LONG RECYCLE RELAYS: are also available. For example, Amperite Delay Relay 115N07T has a delay in closing of 3 to 8 seconds. After heater is disconnected, contacts will remain closed for 30 seconds minimum. Write us about your requirements.

STANDARD AND MINIATURE TYPES OF AMPERITE DELAY RELAYS AND FLASHERS . . . Net $2.40 each

6.3V HEATER RELAYS — Available in both **STANDARD** and **MINIATURE** types for **2 to 180** Seconds Delay. All other **MINIATURE** type relays designated by letter T (e.g. 6N05T) are available in **2-120** seconds delay only. All **STANDARD** octal base types are available in **2-180** seconds delay.

Types shown in Bold type in the chart below are more popular relays, and are more readily available.

LOAD
FLASHER CIRCUIT-NORMALLY CLOSED CONTACTS LOAD IS INDEPENDENT OF HEATER CURRENT.

Flashers operate approximately ⅓ on, ⅔ off. The percentage time on can be increased by reducing the voltage of the heater.

Normally closed flashers are standard, and are indicated by the letter "F." The number following letter "F" denotes flashes per minute. *For example a 6F30 flasher,* has 6.3V heater, normally closed 30 FPM with a ± 15 flashes per minute tolerance. A 6F30T, would be the same type but in 9-pin miniature. Flashers are available from *30 to 90 Flashes per minute* with tolerances as shown in the chart below:

FLASHERS have contact rating of ½a 115V AC, non-inductive.

ELECTRICAL RESET STEPPER
M.E.R.

Type M.E.R.—A direct drive (steps on energization) electrical reset stepper with positive mechanical reset interlock actuated by the reset magnet and unlocked on the first energization of the step magnet. This device assures positive reset on as short a pulse as one-hundredth of a second or even from its own selection contacts. Unit is capable of counting in groups up to 21, then resetting automatically. By interconnecting two or more Steppers, count can be increased to any desired total counting by tens or by any other convenient multiple. Unit can be used to control a sequence of operation and then automatically reset to the initial or starting position. Maximum steps per second, 20. 24 points; 22 active contacts. Coil, 115 v. AC; will operate satisfactorily at 15% below or 10% above this voltage. Stepping coil rated 30 VA, 18 w.; reset coil rated 9 VA, 7 w. Size, 3¼" lg. x 2$\frac{3}{16}$" w. x 3¼" h. Shpg. Wt., 11½ oz.

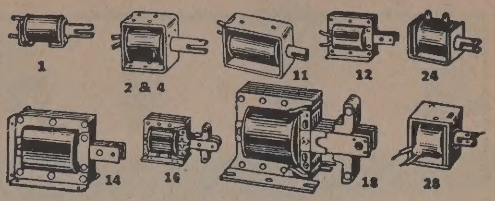
AC-DC SOLENOIDS



Available in both intermittent and continuous duty types. Intermittent types should not be energized for more than 5 consecutive minutes, or be permitted to rise more than 85°C. above 24° C. ambient rating without giving sufficient time to cool between operation cycles. Continuous duty types are designed so they will not rise more than 85° C. above the 24° C. ambient temperature rating when operated at rated load. Plunger has slotted end with ⅛" diameter hole for coupling. In chart, (I) indicates intermittent duty type, (C) indicates continuous duty type.

MINIATURE PLUG-IN *LOW PROFILE LOW COST*

(SERIES MKTR)

Despite its compact size this new totally enclosed, low cost, low profile miniature relay has not compromised the high quality of its progenitor the Series MK open relay. The low mounting profile (dust cover included) has been made possible by incorporating the frame of the relay with the connector-header. Thus a certain basic hardware has been eliminated resulting in important size reduction. Versatility is also assured since the standard terminals can be used with Amp snap-on connectors, printed circuits, or plug-in receptacles. Also available with studs for chassis mounting. Termination can be used for soldered connections. The plug-in-receptacle is true 10 ampere construction. Lugs can be used for either solder or snap-on connections.

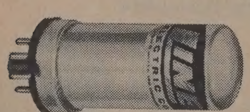
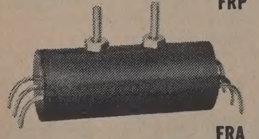
REED RELAYS — 5 STANDARD TYPES

FR



FRP



FRA

FT

FRB

In computer, data processing and guidance system development, design engineers are enthusiastically applying dry reed relays in place of switching diodes. The reasons: miniature profile—life expectancy exceeding 100,000,000 operations—less heat generated compared with switching diodes—3 millisecond operating time and very high resistance in the open contact stage.

To efficiently serve the growing demand for dry reed relays in these and other applications, Line Electric now stocks these 5 standard types for immediate delivery in prototype quantities.

The General Purpose Relay with Telephone Type Reliability

The MAGNECRAFT 88 Relay is an abrupt departure in clapper type relay design. Dimensionally interchangeable with relays made by others the 88 has been developed to **provide Telephone Type Relay reliability at general purpose relay prices.**

Unique in relays of this type MAGNECRAFT 88 Relays have **rugged, precision-built hinge-pin armature bearings** with oversize bearing surfaces—the same construction used in the finest telephone type relays for **lowest friction** and **maximum contact effectiveness** with **stabilized adjustment over long life.**

Glass insulation provides **great di-electric strength unaffected by humidity and temperature changes.**

Molded Nylon bobbins with ruggedized coil terminal inserts **eliminate possibility of shorts.**

Built-in contact wipe with riveted contacts further **advance reliability through long life.**

The many refinements, plus MAGNECRAFT Quality Control and Inspection Standards **give you hidden values beyond price**—unseen values that keep making friends through years of dependable service.

When you inspect and compare you will soon see that many MAGNECRAFT 88 **extra values are not hidden.**

Micro-Miniature Rotary Relays

MAGNECRAFT Class 44 Rotary Relays have been developed to provide increased reliability in the crystal can size. Here are a few of many areas in which improvement has been made:

1. Frame and header assembly of rugged bridge-type construction—assures greatly increased resistance to distortion from shock, vibration and temperature—to military specification requirements
2. Balanced armature—minimizes the effect of gravity, shock and vibration on operating reliability.
3. Hinge design—oversize, instrument type bearings at *BOTH* ends.
   a. Minimizes friction for increased sensitivity and greater contact pressure.
   b. Increases operating reliability and life.
4. The latest and finest developments in high temperature insulation.
5. Hermetically sealed in inert gas for maximum protection against severe ambient conditions.

Contact combination: Double Pole, Double Throw
Contact rating: 2 amperes at 28 VDC or 115 VAC, non-inductive.
Operate Time: 5 milliseconds maximum with nominal voltage
Release Time: 3 milliseconds maximum.

MAGNECRAFT

Ultra High Reliability MAGNEREED Relays

These **Dry Reed Relays** by MAGNECRAFT have pre-adjusted GOLD contacts completely protected from dust, contamination and tampering by hermetic sealing in an atmosphere of inert gas, inside a glass capsule. The isolated switching contacts are actuated by a coil around the glass capsule.

MAGNEREED Relays **bridge the gap between electromechanical relays and complex, costly solid state switching devices** through stabilized contact resistance; high speed positive switching; sensitive operation; and adaptability to complex logic circuits plus ability to **better withstand over-voltage transients and higher ambient temperatures.**

Encapsulated MAGNEREED Relay Assemblies with Printed Circuit "plug-in" terminal pins. (see hand with circuit board at lower left)

Illustration "A" at right shows the "plug-in" terminal pins of an Encapsulated MAGNEREED assembly. Illustration "B" shows the relay on the Epoxy mounting board before encapsulation. The rugged terminal posts (1) extend through the mounting board (2) to form the terminal pins (3).

The leads from the capsule are soldered to the rigid terminal posts with the capsule and coil in position; stresses created when leads are bent that transmit to contacts inside the capsule are completely avoided.

Encapsulation eliminates breakage, protects coil, leads and terminals against mechanical injury and atmospheric change; provides fast and economical circuit board mounting.

MAGNECRAFT

Class 110 Air Dashpot Time Delay Relays

Operate Time Delay adjustable 0.2 to 45 sec.

The new MAGNECRAFT Class 110 Relay has been developed to provide, in a small, inexpensive Time Delay Relay, the high reliability and the great life users have learned to expect from MAGNECRAFT Relays.

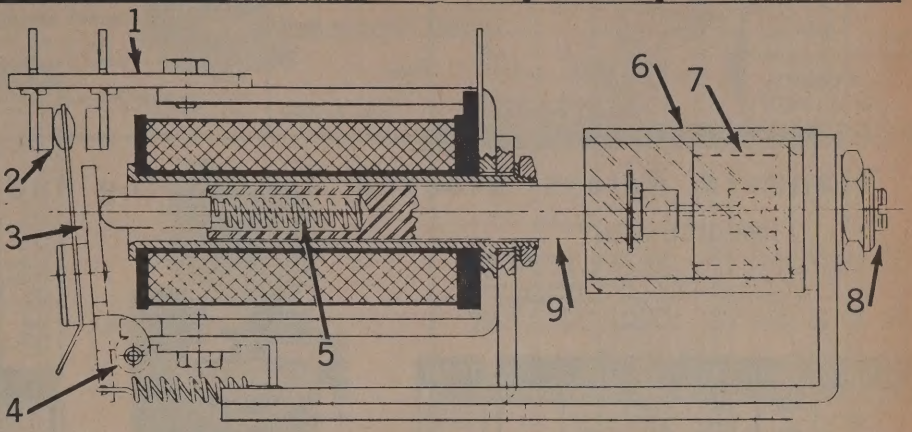
In this unique development, **proven high reliability relay contacts and switching mechanism are merged with a precision-built air dashpot timer.** The result is a masterpiece of simplicity and a minimum number of moving parts that sets new standards of compactness and long life reliability.

The Air Dashpot Timer is built of **non-aging inert materials** to provide the last word in reliability through long life. The cylinder is tempered glass, precision ground to dimensions and polished for lowest friction. The precision fitted piston is of dimensionally stable, low friction graphite. All metal parts are corrosion resistant.

The Solenoid Assembly is unique; a new patent-applied-for invention. When the operating coil is energized the Solenoid pulls out the dashpot piston at the rate for which the timing adjustment is set. Through the timing period, the relay contacts remain in the de-energized (normal) position, **completely free from any tendency to make premature or faltering contact.**

At the end of the timing period (when the Dashpot piston travel is complete) the Solenoid Plunger **instantaneously** completes the magnetic circuit which **snaps in** the Relay Contacts and **holds them under full magnetic power until the coil is de-energized.**

When the coil is de-energized relay contact dropout is **instantaneous and positive;** the Solenoid Plunger Spring helps the relay release spring snap the contacts to the de-energized position.



1. Terminal Board.
2. Heavy Duty Relay Contacts have built-in contact wipe.
3. Ruggedized relay armature.
4. Pin type armature hinge. The same precision built hinge used in the finest telephone type relays.
5. Compression Spring—Compresses when solenoid pulls out dashpot piston: when coil is de-energized, helps snap contacts to normal position and returns piston to start position.
6. Air Dashpot Cylinder—Specially treated glass, precision ground and polished.
7. Graphite Piston—Controls travel of solenoid plunger through setting of timing adjustment.
8. Timing adjustment screw—Provides stepless adjustment from 0.2 to 45 seconds.
9. Solenoid Plunger—When coil is energized the plunger pulls out dashpot piston; at end of travel the plunger instantaneously completes magnetic circuit that pulls in contacts and maintains full contact pressure until coil is de-energized.

Some of the Features

1. **High Reliability through long life:**
   a. Proven high reliability relay contacts and switching mechanism.
   b. Precision-built Air Dashpot of inert, non-aging, low friction materials.
   c. Solenoid assembly completes magnetic circuit instantaneously for positive switching action; protects contacts from chattering and frying.
   d. All metal parts protected from corrosion.
   e. Extreme simplicity — few moving parts; none subjected to distortion.
2. **0.2 to 45 seconds Timing Adjustment with a single screw.**
3. **Instantaneous release.** Air Dashpot reaches "start" position within 0.2 second.
4. **Operates in any position.** Timing should be set in installed position.
5. **Timing Repeat Accuracy ± 10%.**
6. **Temperature Range, —65 to +165°F.**
7. **AC and DC operation.** *AC models rectified for DC reliability from AC service.
8. **Low Power Consumption.** DC, 4 watts; AC, 7 volt amperes.

MODEL "GPR" GENERAL PURPOSE RELAYS

Simple, rugged, low cost relays handling substantial power for small size. Uncomplicated design provides unusual flexibility for making and changing connections and mounting. Stock includes relays in versatile enclosures, some with indicator light, also plate and latching versions. Wide commercial and industrial use where economy and versatility are important.

Basic (Unenclosed) Relay: All connections terminate on barrier-type terminal panel on combination solder-quick-connect (push-on) lugs which accept AMP 110 female connectors. Fixed contacts are integral inlay on the terminal itself. Terminal panel design permits use of relay in printed circuit assemblies.

Contact Ratings: Two ratings—fine silver contacts, 5 amps at 115VAC or 32VDC; silver cadmium fixed contacts, silver cadmium oxide movable contacts, 10 amps.

Contact Combinations: As shown in stock tables. (Also see GPR "Latching Relay" following for larger combinations.) Others made to order.

Insulation: Tested at 1000 VAC.

Coil Wattage: 1.4 watts DC operation; 1.60 watts (2.0 volt-amperes) AC (except see "Latching Relays")

Coil Operating Voltage: Up to 230 VAC 60 cycles or 115 VDC.

Weights—shown below stock tables, are based on 3PDT relays. Relays with fewer poles weigh slightly less.

Enclosed Relays (GPRTA-, GPRTT-, GPRTP-) Three types of clear plastic enclosures as follows:

Chassis Mounting Types: "GPRTA"—("Terminals-Above-Chassis" type) has terminal panel opposite to mounting flange; "GPRTT" — ("Terminals-Through-Chassis" type) has terminal panel on same end as mounting flange, requires chassis cutout.

Plug Mounting Type: "GPRTP"—employs octal plug for 1 and 2 pole relays; 11-pin plug for 3-pole. The octal plug base is integral with relay for rigidity—is **designed with recessed pins which meet UL spacing requirements (150V).**

Indicator Relay: Incorporates light bulb to indicate energized condition of coil. Stocked only in GPRTP enclosures described above. Neon bulb furnished with coil ratings 115 volts and above; incandescent bulbs for coil ratings below 115 volts.

Plate Relays—Feature same physical construction as standard general purpose relays but are adjusted for greater sensitivity and can be used as electronic circuit controls, i.e., in the plate circuits of vacuum tubes.

Latching Relay—Consists of two GPR relays with armatures linked so that the n.o. contacts of one are mechanically latched in closed position when, and after, this relay is energized. When 2nd relay is energized, first relay restores and latches 2nd. Permits switching of twice the number of circuits and holding without coil current. Coil rating is higher than non-latching types, 3.70 volt-amperes. Unenclosed type "GPRLE". Enclosed type "GPRLETP" in clear plastic case with Jones plug P-324-SB. Plug fits Jones S-324-AB socket.

TELEPHONE TYPE RELAYS

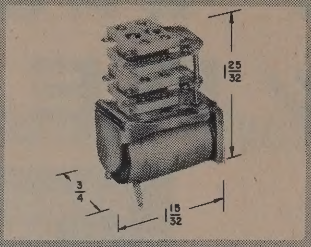
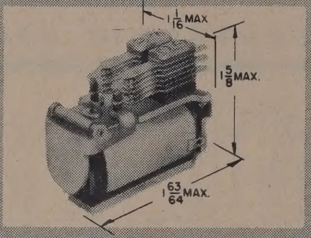
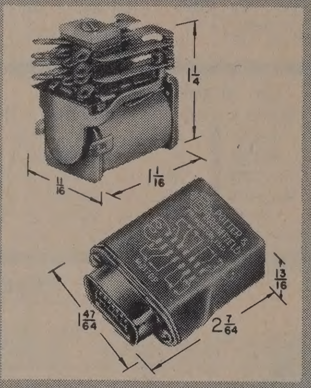
MC SERIES Built with ceramic contact spaces for RF switching to minimize losses at high frequencies. Intercontact capacitance 1.5 mmfd. max. Tinned, pierced solder type terminals. Mounting: Four No. 3-48 tapped holes on ⅜" x ⅜" centers. Contacts: 3/32" dia. palladium. Weight: 2 ozs.



MF SERIES Unusually low coil temperature rise is an inherent feature of this efficient AC miniature telephone type relay. The rise does not exceed 20°C for a 4 Form C relay with continuous operation at 115V AC 50/60 cycles @ 25°C. The MF is economical since even a large number in an enclosed chassis require no costly cooling, and less costly circuit components, such as transformers, can normally be used. Sensitivity: 2.3VA (4 Form C). Two mountings: Two 6–32 tapped holes on ¾" centers; four 4–40 tapped holes on ⅜" x ⅜" centers. Weight: 3 ozs. maximum.

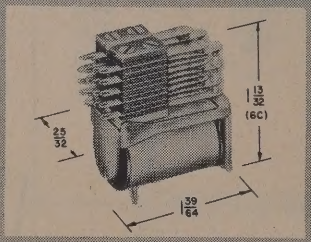


MG SERIES Sub-miniature telephone type relay for aircraft, computer and other applications requiring good shock and vibration characteristics. Furnished open, sealed or in nylon dust cover. Mounting: Open model has four No. 3-48 tapped holes on ⅜" x ⅜" centers. Sealed model has three No. 4-40 threaded studs on 1" x ½" centers. Dust cover model has plug-in header that fits Amphenol receptacle No. 57-20140 or similar. Contacts: 3/32" dia. silver. Weight: Open 1.2 ozs.; Dust cover 2.0 ozs.; Sealed 2.75 ozs.



MH SERIES MINIATURE TYPE

Ideal for miniature program applications where space and weight are factors. Mounting: Open model, MH11L, one No. 6-32 threaded stud 11/32" long plus locating boss. All other open models have four No. 3-48 holes on ⅜" x ⅜" centers. Sealed models, M enclosures, three 6-32 NC 2 threaded studs on 1¼" x ½" centers. D enclosures, three 6-32 threaded studs on 1 3/16" x 15/16" centers. All sealed models have hook end solder terminals. All models have ⅛" dia. gold-flashed silver contacts. Weight: Open models 2½ oz. max. Sealed models 5 ozs. max.



ML SERIES A small telephone type relay having excellent sensitivity with outstanding switching capabilities. Ideal for transistorized computor networks, telephone systems and battery powered communications equipment. Single contact arms have ⅛" dia. gold-flashed silver contacts rated at 3 amps for 100,000 operations. Pierced solder terminals. Mounting: Four 3-48 holes on ⅜" centers. Weight: 2.5 ozs.

DEPENDABILITY

Rare long life, high speed, and versatile application with unvarying dependability—all are the result of an unusual combination of advantages found only in mercury-wetted contact relays. The basic component of these relays is a glass capsule containing the contact arrangement and a small reservoir of mercury sealed hermetically under a high pressure hydrogen atmosphere. This arrangement does away with contact bounce, chatter, pits and welds. Make or break is positive—every time.

LONG LIFE

The use of mercury assures renewal of a film of mercury on all contact surfaces for every operation—the major reason why you can think in terms of billions of operations when you consider P&B mercury-wetted contact relays. Proper application, of course, is a requisite.

HIGH SPEED

The operate time of JML relays is from 3 milliseconds to 1.1 ms, depending upon coil power. Contingent on the adjustment of the permanent magnets, the operate time of JMP relays is approximately 3 ms. Single capsule JM relays have an operate time of just less than 3ms using 2 watts of power. Their release time is about 3.2 ms.

TWO TYPES OF CAPSULES

The capsule used in JML relays has a SPDT, break-before-make, (Form C), non-bridging contact arrangement. It utilizes two fixed contacts, one normally closed and one normally open interposed by the armature which serves as the movable contact. Each capsule used in JMP, JM1, JM2, JM3 and JM4 relays has a SPDT, make-before-break, (Form D), bridging contact arrangement. Its contact assembly consists of two normally open and two normally closed contacts with the reed extension of the armature interposing and acting as the movable contact.

JML SERIES-JMP SERIES

Both JML and JMP relays achieve a high rate of sensitivity by permanent magnet biasing.

Single-Side-Stable

The magnets are factory-adjusted so that the relay will release (open its normally open contacts) when the coil current is reduced to less than must release value.

Bi-Stable

The magnets are factory-adjusted so that the armature remains in the last operated position until opposite polarity is applied.

Chopper

The magnets are factory-adjusted for approximately equal dwell on the normally open and closed contacts when the coil is driven by 60 cps sine waves.

JM1-JM2-JM3-JM4 SERIES

JM1 contains a single capsule with a single or dual wound coil. JM2, JM3 and JM4 have single coils containing 2, 3 or 4 capsules, providing DPDT, 3PDT or 4PDT, respectively.

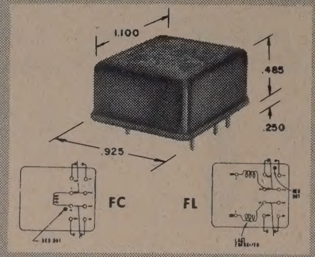
Potter & Brumfield High Performance Relays

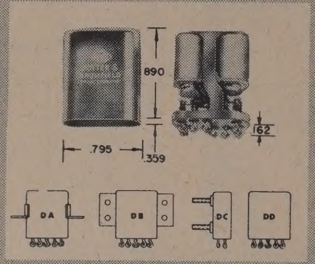
FC SERIES Conventional micro-miniature relay lies flat on printed circuit board. Withstands 100g shock, 400g linear acceleration, 30g vibration to 2000 cps. Ambient temperature range: −65° to +125°C. Hermetically sealed. Bifurcated contacts. Plugs in on .2″ grid. Meets applicable sect. MIL-R-5757D, and ABMA #PD-R-187. Weight: .75 ozs.

FL SERIES Dual-coil latching relay has same specs as above, except operates by pulsing each coil alternately (observing coil polarity); or connecting the coils in series from a reversing (polarized) source. Remains latched without coil power.



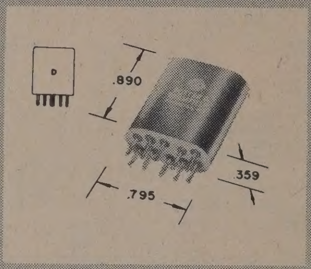
SC SERIES Micro-miniature permanent magnet relay for low power, high shock/vibration applications. 100g shock, 30g vibration to 2000cps with no contact openings. Ambient temperature range: −65°C. to +125°C. Features single coil action and conforms to standard micro-miniature coil operation except polarized connections because of magnetic circuit. Positive terminal marked with red dot. Mounting: SC11D°°, SCG11D −DA, −DB, DC and DD correspond to similarly designed SL mountings. Weight: ¾ oz.

°°Cinch No. 54A20730 and Armel No. HRK-1, 8-pin receptacles available from distributors for plug-in applications.



SL SERIES Dual coil micro-miniature magnetic latching relay with same shock/vibration, resistance and ambient temperature range as SC. Coils may be connected in series for polar operation. Mounting: SL11D° for plug-in applications: —DA has shoulder flangers with two .104″ x .136″ holes on a 1.062″ center; —DB has a welded bracket with four .125″ dia. holes on 1.062″ x .281″ centers; —DC has two No. 4-40 NC 2A threaded studs on .488″ x .220″ diagonal centers; —DD has plain case with hook end solder terminals. SCG-SLG11D have plug-in terminals on .2″ grid.

°Viking No. P/N VB10/3DV 1 10-pin receptacles available from distributors for plug-in applications.



TL SERIES High performance 4PDT micro-miniature magnetic latching relay for severe environments. Encapsulated and hermetically sealed coils within hermetically sealed relay case can't contaminate contacts by outgassing. Strong permanent magnetic forces keep contacts locked in desired position when relay is de-energized. Approx. 0.5ms transfer time. Temperature range: −65°C to 125°C. Meets or exceeds applicable sections MIL-R-5757D and ABMA-PD-R-187. Weight: Approx. 1¼ ozs. Mountings: D = plain case, plug-in header. DA = shoulder bracket .300″ from base, hook-end solder. DB = flat plate, .593″ wide x 1.60″ long, 4—.125″ dia. holes on .281″ x 1.30″ centers, hook-end solder.

POTTER & BRUMFIELD

Specialists in RELAYS for a third of a century

Three modern plants in the United States are devoted solely to engineering and producing electromagnetic relays. Manufacturing methods, processes and equipment are constantly re-evaluated and kept current with every technical advance. Augmenting P&B's own facilities are the vast research and financial resources of our parent organization, American Machine & Foundry Company.

ORDERING INSTRUCTIONS —— File-O-Matic Sec. 23

All relay contacts are rated at 115 volt-60 cycle, non inductive load.

When ordering specify relay type and coil voltage or resistance.

Example: PR5AY, 115 Volts AC, 60 cycles or LB5, 2500 ohms resistance.

To operate 110V DC relays on 220V DC use a 5 watt wire-wound resistor of a value approximately the relay coil resistance in series with the relay coil.

CONTACT LEGEND: S-Single; D-Double; P-Pole; T-Throw; N-Normally; O-Open; C-Closed; B-Break; M-Make.

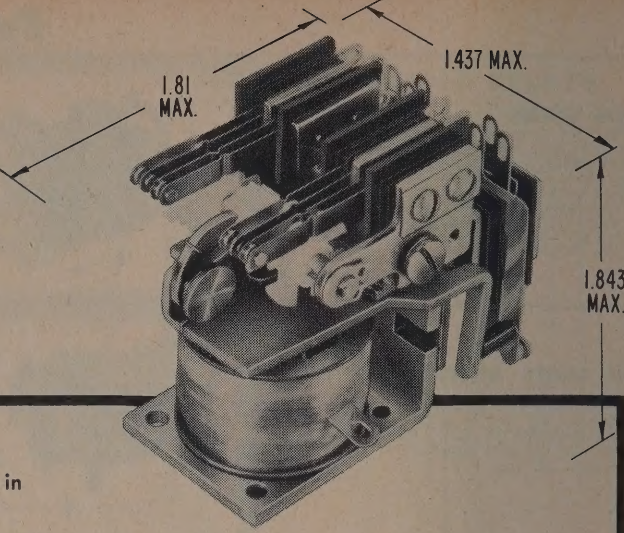
RELIABLE IMPULSE/SEQUENCING RELAY

GM SERIES. Versatile single-coil relay for sequence switching. Choice of relays with 2 or 4 Form C contacts.



BROAD RANGE OF APPLICATIONS

- Any application relating to contact closures or openings from one to six operations per shaft revolution.
- Off/on/volume controls in TV circuits.
- Self-interrupting and homing devices
- Vending machines.
- Coin counting devices.

GM SERIES Unusually versatile switching makes this impulse/sequencing relay especially suitable for many applications where single coil latching is desirable. The 2 Form C contact arrangement is switched alternately by cams. Positive switching is by indirect action during drop-out of the armature. It can also be furnished with additional 2 Form C auxiliary contacts (designated by "L") operated directly by the armature. All contacts are rated at 3 amps, 115V AC (non-inductive). Available with AC or DC coils. AC version operates on a 50% coil duty cycle (5 min. max.). Mounting: 8-32 tapped core with a locating boss. Weight: With aux. contacts 4¾ ozs. Without aux. contacts 4 ozs.

SELECTION GUIDE TO SIGMA SENSITIVE RELAYS AND ELECTROMAGNETIC PRODUCTS

The checkerboard below is designed to help you select the Sigma relay or electromagnetic device most suitable for *your* application — without wading through *all* the information on *all* products just to find the one or two you're most interested in. Look down the left column and pick the key characteristics you need, then read across to see which products have the best combination of these characteristics. Further information and data on a specific relay or product Series number can then be found on the following pages or in the complete Sigma catalog. Blocks with the letter "C" in them indicate the catalog sections where detailed bulletins may be found (e.g., 11 AC relays are described in the catalog section entitled "AC Relays").

C Catalog Product Classification

if you don't like tables . . .

. . . and would rather just tell us what you need in a sensitive relay, switching device or other electromagnetic product and what you want it to do, we will be happy to say exactly what we have or perhaps can build for your requirements and what performance you can expect of it. In fact, this procedure would have mutual benefits even though you may have already narrowed the field to a particular Sigma product by using the data in this folder. Capable, experienced application engineering on our part saves everyone's time, frequently prevents misunderstandings, and in general gets the job done to everyone's satisfaction. It will pay you not to overlook its advantages.

SCHRACK RELAYS

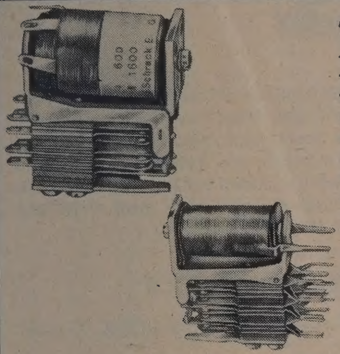
MINIATURE RELAY TYPE RK



A small and reliable, fast-acting open-type relay for a wide field of applications, including telephone equipment. May be fitted with a maximum of 18 contact springs (6 Form C or any other combination not exceeding 6 movable arms). A.C. and D.C. coils are available, using approximately 400 mW (500 mVA) per movable arm. Contacts are fine silver. Optional: solder lugs for printed circuit boards.

For further information, ask for Catalog A402A.

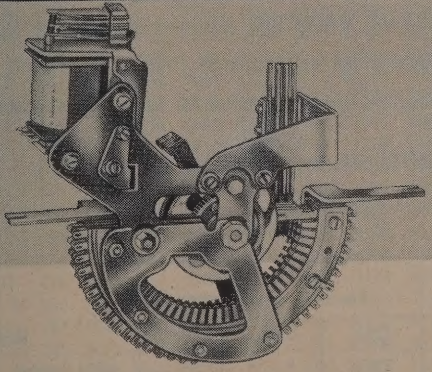
ROTARY STEPPING SWITCH TYPE RW

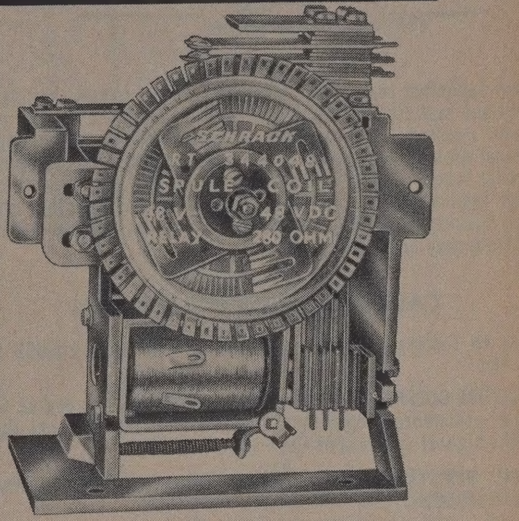


This is a large-capacity industrial control device, also suitable for telephone applications. Its conventional design has an open metal frame so that any number of contact banks, up to a maximum of 8, can be built up. Each bank level has 35 points plus one zero position. By using wipers in alternate levels, the stepper can be made fit for 70-point operation. Cam-operated contacts (maximum 2 cams, 8 springs) are optional. Driving coils from 12 volts d.c. to 60 volts d.c. are available.

This stepping switch is eminently suitable for applications requiring close adaptation to special requirements (number of bank levels, auxiliary springs, etc.) without restrictions of space and power.

Inquiries are invited.

ROTARY STEPPING SWITCH TYPE RT



Compact, versatile and reliable, this rotary stepping switch provides 48 contact points arranged in 4 groups of 12 points each, with 4 wipers—equal to a 4-bank, 12-point stepper, however with minimal dimensions. Further design details are:

Clear plastic dust cover to protect contact points

Sturdy die-cast light metal frame for easy mounting

Solderless taper tabs on contact points, suitable for AMP connectors

Cam-operated off-normal contacts and relay operated contacts (both with 6 amp. rating) are standard equipment

Optional features:

— Mechanical reset version, with a separate coil and spring arrangement which returns wiper assembly to home position when energized.

— Rectifier attachment for a.c. operation of stepping switch.

Standard coil voltages available: 12, 24, 60, 115 and 220 volt d.c.

Applications, counting, sequencing, programming or memory storage operations, where available space and power are limited.

Over-all dimensions: normal version 3.7 X 2.25 X 4.25 inches, with reset coil 3.7 X 2.25 X 4.75 inches

RESISTORS

±1% PRECISION ®CARBOFILM AND ®CARBOMOLD RESISTORS

CARBOFILM PRECISION RESISTORS

Precision deposited carbon resistors designed for circuits calling for the accuracy and stability of wire-wound resistors with the marked economy of carbon resistors. The exclusive Aeroglaze conformal coating offers mechanical protection superior to any other coating eliminating the need for special tubes, sleeves and jackets. Aeroglaze coating will meet all moisture requirements of MIL-R-10509B. Carbofilm resistors offer outstanding stability, low voltage coefficient, low capacitance and inductance in high frequency applications.

CARBOFILM CHARACTERISTICS

TESTING: All Tests conducted in accordance with MIL-R-10509B requirements.

TEMPERATURE COEFFICIENT: Approximately 200 ppm per degree C in the lower resistance ranges and not exceeding 500 ppm per degree C in the highest values specified by MIL-R-10509B.

MOISTURE RESISTANCE: Will meet or surpass the requirements of MIL-R-10509B.

LOAD LIFE: When tested for more than 1,000 hours at full load operation in 40°C ambient temperature, maximum changes are less than 1% with an average change of less than 0.5%.

TEMPERATURE CYCLING: After 5 complete temperature cycles there is an average change of 0.21% with a maximum change of less than 0.5%.

SHORT TIME OVERLOAD: When subjected to 2.5 times the rated working voltage, but not exceeding 2 times the maximum rated voltage for 5 seconds, changes are less than 0.25% with an average change of 0.13%.

LOW TEMPERATURE OPERATION: Maximum changes are less than 1%.

ACCURACY: Guaranteed tolerance of plus/minus 1% at 25°C. (77°F.)

AGING: Due to manufacturing process and control, changes attributed to aging are negligible. The average change in resistance for self-aging is approximately 0.2% per year.

VOLTAGE COEFFICIENT: Does not exceed .002% per volt.

CARBOMOLD PRECISION RESISTORS

A superior molded carbon-deposited resistor manufactured under the most exacting quality control standards and specifications assuring excellent performance under the most adverse operating conditions. Resistors are encapsulated in a strong reinforced moisture and heat resistant plastic for added stability, precision and reliability. Rated for full load operation at 70°C and linearly derated to zero load at 150°C. Will meet or exceed insulation resistance requirements of MIL-R-10509D.

CARBOMOLD CHARACTERISTICS

TESTING: All tests conducted in accordance with MIL-R-10509C requirements.

TEMPERATURE COEFFICIENT: Extends from approximately 200 ppm per degree C in the lower resistance ranges to and not exceeding 500 ppm per degree C at the highest values specified by MIL-R-10509D.

MOISTURE RESISTANCE: Will meet or surpass the requirements of MIL-R-10509D.

LOAD LIFE: When tested for more than 1000 hours at full load operation in 70°C ambient temperature, maximum changes less than 1% with an average change of less than 0.5%.

TEMPERATURE CYCLING: After 5 complete temperature cycles there is an average change of 0.21% with a maximum change of less than 0.5%.

LOW TEMPERATURE OPERATION: Maximum changes are less than 1%.

ACCURACY: Guaranteed tolerance of plus/minus 1% at 25°C.

AGING: Average change in resistance for self-aging, approximately 0.2% in a year.

VOLTAGE COEFFICIENT: Does not exceed .002% per volt.

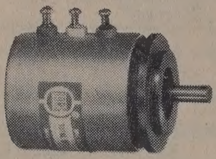
TRIMMERS, POTENTIOMETERS, DIALS AND MOTORS

MICROPOT® TRIMMING POTENTIOMETERS

Borg produces 10 complete series of Micropot trimmers—from subminiature square trimmers to standard sizes. Borg trimmers are offered in general purpose, humidity-proof, high temperature, or humidity-and-high-temperature models, in a wide choice of resistance ranges and end terminals. Borg trimmers have a 40-turn adjustment screw for an extremely fine degree of selectivity. Wire-wound resistance elements are up to 50% longer than competitive types.

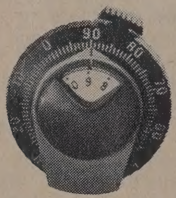
MICROPOT® CARBON TRIMMERS

Borg's Micropot carbon trimmers provide infinite resolution with a wide range of resistance values.



MICROPOT® PRECISION POTENTIOMETERS

Borg offers a complete line of Micropot potentiometers for precision application—military and commercial—ranging from ½-inch to 3-inches. They are available in single-turn or multi-turn models with high resolution and a wide range of resistance values.

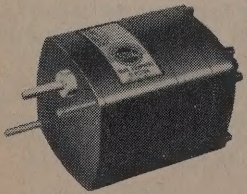


MICRODIAL® CONCENTRIC DIALS

Engineers consider the Borg Microdial line the most comprehensive in the industry. Concentric scale Microdials are available in three basic series. Each features epicyclical gearing to eliminate ambiguity, and large numerals for high readability. Each dial is available with or without brake. Most Microdial models are offered in a choice of color combinations for coding.

MICRODIAL® DIGITAL DIALS

Borg's digital Microdial line includes three, four, or five digit models. The 1300 Series has optional 10, 100, or 1000 turns. The 10-turn 1330 Microdial has internal illumination, convex lens, and is available with or without brake. Borg dials offer 1000:1 indexing accuracy, and are virtually free from accidental setting changes.



SUB-FRACTIONAL MOTORS

Borg's line of sub-fractional h.p. motors includes synchronous, induction, or low inertia types, in two or four pole models. Borg motors speed/torque ratios meet the most exacting requirements of instruments, controls, and related products.

Only Bourns Trimpot Potentiometers Give You All Of These Outstanding Features

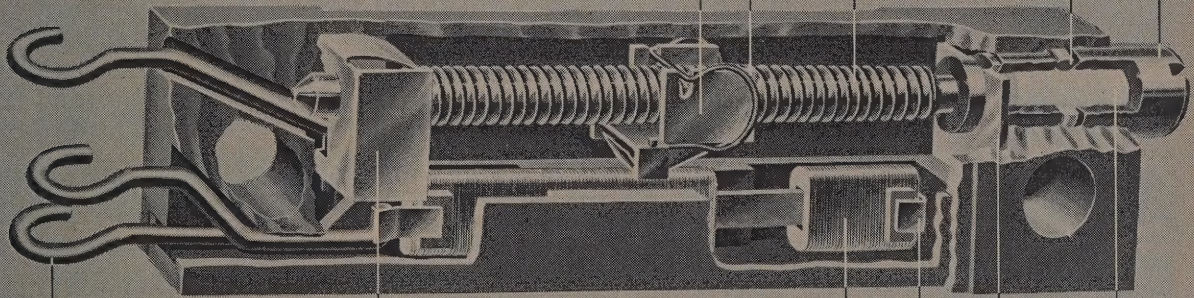
SPRING—Carriage spring provides positive no-slip performance during rotation plus a reliable idling feature at mechanical limits of travel.

WIPER CARRIAGE—Gold-plated carriage is welded to precious metal wiper for low noise.

LEADSCREW—Stainless steel leadscrew is corrosion-resistant, withstands salt spray.

O-RING—Silcone rubber O-ring seals potentiometer against humidity, withstands high temperature.

SHAFT HEAD—Stainless steel with machined slot for screwdriver adjustment. Meets military salt spray requirements.



SOLDER TERMINALS—Tinned terminals are compact, yet large enough for easy soldering. Teflon-insulated leads and printed circuit pins are also available.

PICK-OFF—Gold-plated beryllium copper pick-off maintains constant pressure on leadscrew.

SILVERWELD® TERMINATION—This exclusive Bourns feature is unequalled in ruggedness. There is a metal-to-metal bond from the terminal to the resistance wire.

ELEMENT—Special ceramic element card for maximum reliability is precision wound with low-temperature-coefficient resistance wire.

SHAFT RETAINER—Shaft is locked in place for top performance under extreme shock, vibration and acceleration.

SHAFT INSULATOR—High-dielectric-strength, ceramic insulator isolates shaft head from internal circuits.

This cutaway of Model 224 shows the typical high quality to be found in all Bourns Trimpot potentiometers, although some features may vary from model to model.

Indestructible Termination
The exclusive Bourns Silverweld® termination, alloyed with multiple turns of the resistance element, is indestructible under thermal or mechanical stress. It eliminates termination breakage, a major cause of potentiometer failure.

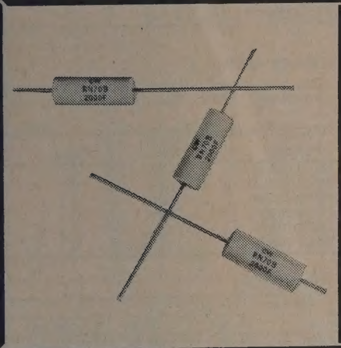
Precision Film Resistors, Potentiometers, Spark Suppressors, Carbon Resistors, Switches and Specialties

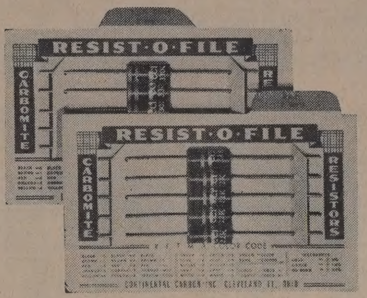
CONTINENTAL WIRT

There's long life and superior performance behind every C-W component —meeting highest quality and reliability standards at a moderate cost.



Molded Deposited Carbon Precision Film Resistors

C-W molded carbon film resistors are designed and manufactured to meet or exceed performance requirements of MIL-R-10509D. Available: ⅛ W. thru 1 W.; 10 ohms thru 50 megohms. Request Bulletin 2023-61.

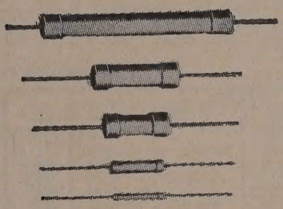


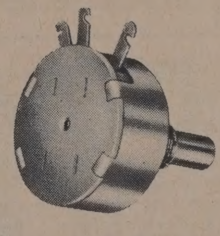
Carbomite Resistors

Insulated fixed composition resistors for replacement and service applications, ¼ thru 2 watts. Available as Type "M" packaged in bulk. Also, Type "MR" consisting of five Type "M" resistors of one resistance value and tolerance mounted on one 3x5 index card, ten cards per package. File drawers and storage cabinets for Type "MR" resistors available. Request Bulletin 2047.

Coated Deposited Carbon Precision Film Resistors

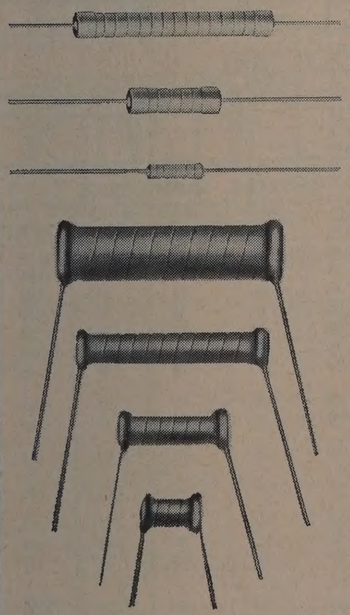
C-W coated deposited carbon film resistors — while being designed and manufactured to meet or exceed characteristic "X" requirements of MIL-R-10509, are more modestly priced than molded resistors. Available: ¼ W. thru 2 W; 10 ohms thru 100 megohms. Request Bulletin 307-A-60.





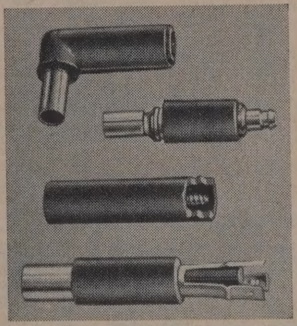
Wire-Wound Controls

Available from ¾" O.D., 1½ watt trimmer control thru 5 watt phenolic housed controls. Available with conventional single or dual element for "L" pad and similar applications. Shafts, bushings, mounting hardware and other features available to meet your specific requirements. Request Bulletin 2009, Drawings F-889, F-890, and E-1000.



Nobeloy and Nobelette Metal Film Precision Resistors

For applications where fine precision and good stability must be complemented with low extremes in resistance range, or, low noise characteristics, at a moderate cost. Metallic resistance element deposited on low loss ceramic core, is protected by rugged vitreous enamel coating. Available: ½ W. thru 5 W.; less than 1 ohm thru 15 megohms. Request Bulletin 302-60.

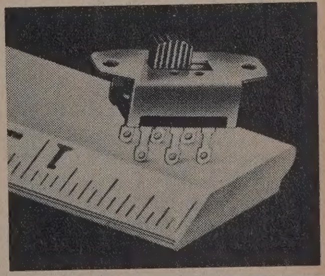


Automotive and Oil Burner Spark Suppressors

For suppression of radio and television noise interference due to ignition spark discharge at plugs and high tension distributor; and due to ignition discharge action of oil burner igniting coil. Complete line of resistive type suppressors. Request Bulletin 125-61.

Slide Switches

Full line of slide switches in current ratings from .5 amp thru 6.0 amps; one pole thru 4 poles; 2 position thru 4 position; detent action or spring return. Also midget "swidget" where space is limited. Request Bulletin 2039 for full technical details.



Your C-W distributor can supply prices, and bulletins mentioned above — also details on the convenient RESIST-O-FILE stocking plan for composition resistors.

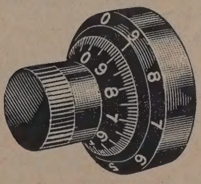
CLARODIALS

Ten-Turn Concentric Scale Dials



Calibrated dials designed for multi-turn potentiometers up to 10 turns or other rotary devices. CLARODIALS require only one inch of panel space. The knob attaches directly to the shaft, and the body of the dial is mounted rigidly to the panel. As a result, accurate readings with a ratio 1000:1 for ten turns are provided with zero backlash and no reading error. CLARODIALS are made of anodized aluminum for years of attractive use. Mounting requirements are ¼″ shaft and ⅜″-32 NEF-2A bushing. Adapters for ⅛″ dia. shafts are available.

PRODUCTS OF THE HOUSE OF RESISTORS® CLAROSTAT® RESISTORS • CONTROLS RESISTANCE DEVICES

AXIAL LEAD VITREOUS RESISTORS

Available in three sizes 3, 5 and 10 watts, Series VC3D, VC5E and VC10F. Axial lead resistors are particularly adapted to printed circuit, terminal board, and point-to-point wiring applications. These resistors save considerable space because of the elimination of mounting brackets and terminal lugs. Standard resistance tolerance is ± 5% for 1 ohm and higher and tolerance below 1 ohm is ± 10%. Attractively packaged in a newly designed carton particularly adapted to this new axial lead resistor, beautifully finished with Clarostat's new vitreous shade of teal green.

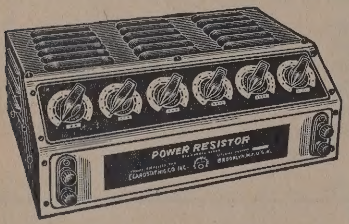
POWER RESISTOR DECADE BOX



POWER RESISTANCE DECADE
CLAROSTAT

The Resistance Decade Box, Model 240-C for bench use — Model 250 for rack mounting, provides any resistance from 1 to 999,999 ohms for working circuits at the flip of a switch. Six front-panel dials enable selection in 1 ohm increments, the total value being read directly from the dial. Each decade has a power rating of 225 watts maximum, 1,000 VDC or 660 VAC maximum.

Resistance changing switches are of the type that prevent a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Knobs indicate the resistance value being used at a glance.

Clarostat GREENOHM Power Resistors are used throughout. These components are wire-wound power resistors on ceramic tubes and coated with an exclusive Clarostat inorganic cold-setting cement, providing the most rugged, long-lasting, trouble-free power resistor available. The resistors are mounted in rigid metal supports.

Overall length: 240C: 13″ long x 8½″ deep x 5¾″ high, weight 11½ lbs. 250: 19″ long x 13¾″ deep x 7″ high (fits in standard 19″ relay rack), weight 18½ lbs.

SUGGESTED USES: Resistance determination, Load Resistance, Meter Multiplier, Calibrating Meters, Providing any desired ohmage as a universal power resistor.

Clarostat Power Rheostats maintain their full power rating at settings as low as one-third rotation without excessive temperature rise. Standard overall resistance tolerance plus/minus 10%. Closer tolerances are available upon special order.

AN Types (aircraft type) are basically the same units mechanically and electrically except that they are encased in a metal housing (versus ceramic). Terminals are screw type lugs to prevent corrosion. Approved under MIL-R-6749.

Units mount through a single hole, a locking pin is provided for rear panel mounting.

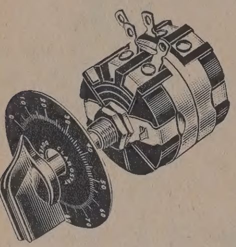
SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre installations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

CONSTANT-IMPEDANCE CONTROLS



Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at 2½ watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.

CONSTANT IMPEDANCE OUTPUT ATTENUATORS

Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, ⅜" bushing diameter. 1" shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

SPECIAL DRIVE-IN THEATRE L-PAD

To meet the needs of theater sound systems, more especially those of drive-in theaters, a special 8 ohm L-Pad is now available, containing two separate windings of 5 ohms and 40 ohms. Also 50 ohm linear rheostat and 35 ohm tapered rheostat, as listed. Units have ⅜-32 bushing ⅜" long, and 1½" round shaft.

Cat. No. CM17084 35 ohm tapered rheostat **Net Price $1.32**

SPACE-SAVER CONSTANT-IMPEDANCE ATTENUATORS

Characterized by reduced depth and diameter, these attenuators are ideal for use in remote control of speakers since they are small enough to be installed in standard electrical boxes in the home, office, stockroom, etc.

These controls are rated 2 watts D.C., but will handle up to 4 watts of audio, depending upon the type signal being handled. (As the frequency becomes constant, wattage reduces to 2 watts or the same as the D.C. rating).

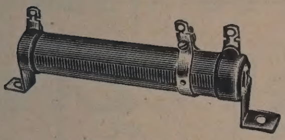
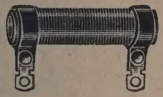
"GREENOHM"* WIRE-WOUND RESISTORS





FIXED TYPES Wire-wound resistors for most rugged applications. Will withstand tremendous overloads and temperature changes without alterating resistance values or appearance. Wire windings on high grade ceramic tubing and coated with special inorganic cement. In accordance with EIA standards, overall tolerances are ± 5% for resistors of 50 ohms and higher. For resistors of 49.9 ohms and lower, overall tolerances are ± 10%.

ADJUSTABLE TYPES Same electrically and mechanically as Fixed types, but incorporating sliding band or bands for tapping any desired resistance values. Slider band tightened by means of screw. In accordance with EIA standards, overall tolerances are ± 10%.

CORNING GLASS/METAL OXIDE FILM RESISTORS

Fuse a tin oxide coating into glass, cut a helix in the coating, attach leads and you have a simple, rugged, exceptionally reliable CORNING resistor. Its TC is guaranteed from ±0.015% to ±0.050% depending on type. Overload change is less than 1%; noise level typically less than 0.1 uv/v. It is non-inductive above 280 ohms. Standard values from 1.00 to 9.76, except for C resistors whose values run from 10 to 91 on standard decade tables, are the same as standard decade values in applicable military specifications.

PRECISION RESISTORS • CARBON & METAL FILM

The precision carbon and metal film resistors listed below are available as aged or power conditioned units — to customer specifications. Aged resistors are burned in for 100 hours at rated power and operating temperature with a failure reference of 0.1%ΔR. Power conditioned units are stressed for 6 hours up to 6.25 times rated power (depending on size) at 25°C with a failure reference of 0.5%ΔR. Electra's complete line features cap construction for positive termination and rugged handling. Coated units are conformally covered with new Impervium coatings, which achieve a MIL level moisture barrier. Catalogs detailing complete technical information will be sent on request.

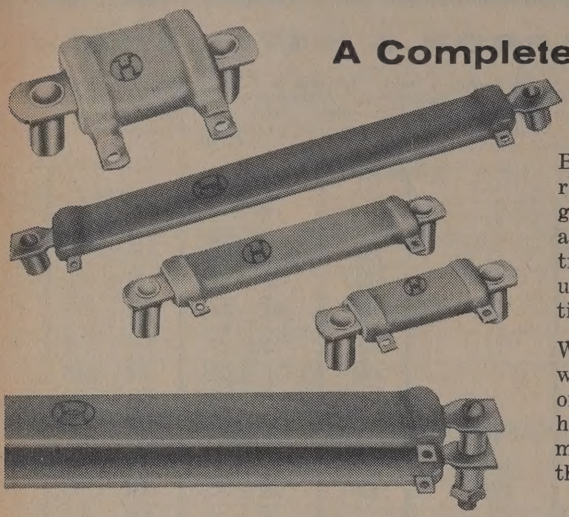
BLUE RIBBON RESISTORS



A Complete Line of Flat and Stack Mounting Power Resistors

Blue Ribbon wire-wound power resistors are made of quality materials with matched coefficients of expansion and are covered by H-H gray vitreous enamel for complete protection against environment and overload. The aluminum through bracket improves heat dissipation, minimizes hot spots, and allows a higher wattage rating per unit of space. Bracket construction facilitates stacking and adds additional space saving.

When BR resistors are stack mounted they must be derated to keep within rated operating temperatures. Watt ratings shown are based on the use of a steel panel 10 inches square x .040 thick supported horizontally. For non-metallic panels reduce rating 15%. When mounted as described in an ambient temperature not exceeding 40°C the maximum temperature rise of the resistor will not exceed 300°C.

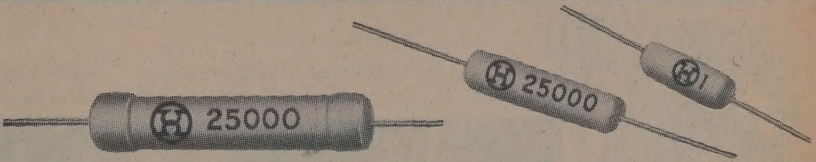
HARDWICK, HINDLE · INC AXIAL-LEAD RESISTORS

The Quality
INDUSTRIAL LINE
since 1924



The "free air" wattage ratings of these axial lead resistors are based on a hot spot temperature rise of 300°C. (540°F.) in an ambient temperature not exceeding 40°C. (104°F.). These are the finest quality vitreous enameled wire-wound resistors made with application-tested parts and employing precision assembly. Since parts have matched heat expansion, crazing and cracks are eliminated. All welded construction.

Standard Sizes:

Resistor Type	Tube Dimensions A	Tube Dimensions B	Watt Rating Nominal	Recommended Resist. Range Min. ohms	Recommended Resist. Range Max. ohms
9/16 GA	9/16"	1/4"	3 Watts	1	10,000
1 WA	1"	11/32"	5 Watts	1	25,000
1 3/4 ZA	1 3/4"	13/32"	10 Watts	1	50,000

Standard tolerance is ±5% for all stock units.

HARDWICK, HINDLE · INC
ADJUSTABLE RESISTORS

The Quality
INDUSTRIAL LINE
since 1924

This resistor, embodying features originated by Hardwick, Hindle possesses the many advantages of Vitreous Enamel Construction, plus an adjustable feature. The winding is closely and evenly spaced, assuring ample insulation between turns. Where winding is exposed in the track, its underside is tightly embedded in the enamel, the upper surface only being exposed for contact with adjustable band.

  - (c) N.E.M.A.
  - (d) Listed by Underwriters Laboratories, Inc. (Types H-50 through and including H-150)

Hardwick, Hindle rheostats are exceptionally rugged without being over-designed or dependent on untried principles of construction. They exhibit "market quality" characteristics to meet the most exacting specifications, and special design features assure long life and protection under extremes of humidity and abnormal atmospheric conditions. The "buss bar" contact arm automatically adjusts for complete, continuous contact, and smooth, flexible control. Our blue-gray, high temperature enamel—thermo shock proof—gives increased service life with an extreme factor of safety.

In addition to the complete standard line of rheostats listed at the right, Hardwick, Hindle, Inc. welcomes the opportunity to work with you in the development of rheostats or potentiometers to your specifications. Tapered windings, tandem assemblies, special resistances, and many other electrical or mechanical modifications can be supplied.

Hardwick, Hindle rheostats are packaged one unit per box.

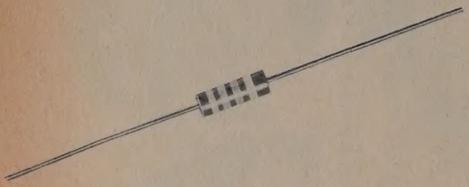
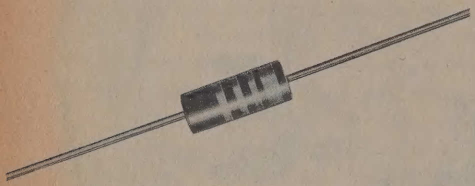
INTERNATIONAL RESISTANCE COMPANY

Insulated Carbon Composition and Wirewound Resistors



FIXED COMPOSITION RESISTORS. IRC's unique design of ½- and 1-watt resistors mean better performance and reliability. 50% more molding around the resistance element assures greater moisture protection. The working element is a layer of carbon thermally bonded to an inert glass filament for better resistance and temperature characteristics. Ribbed, shoulder leads are deeply imbedded in the molding to prevent twist or pull-out and act as heat sinks to conduct heat away for cooler operation and longer field life.



VERSATILE WIREWOUND RESISTORS. Type BWH is a new molded wirewound resistor that can be used as a direct replacement for composition resistors at about half the price. In one size (RC32) it covers 3 different wattage requirements and provides substantial cost savings over 1 and 2 watt fixed composition units, and space saving over 2 watt RC42 size units. The BWH has the stability, reliability and long life of a wirewound unit. It meets all the performance requirements of MIL-R-11.

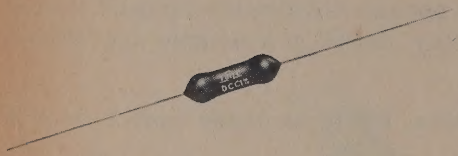
Precision Resistors



DEPOSITED CARBON PRECISIONS are available in ½, 1 and 2 watt sizes. The wide range of values, 1% tolerance, economy, low voltage coefficient, excellent frequency characteristics, predictable temperature, high voltage rating, low noise level, and small size make IRC deposited carbon resistors ideal for application in advanced electronic equipment and critical TV circuits.

MOLDED DEPOSITED CARBON RESISTORS are designed for high reliability, stable performance, low voltage coefficient, low capacitive and inductive impedance in high frequency applications. In miniature ⅛, ¼, and ½ watt sizes, plus 1 and 2 watt types.

Standard tolerance is 1%. (2% tolerance on high range units.) The housing gives complete protection, and offers better heat dissipating qualities. This results in improved load life and maximum moisture protection.

FUSE RESISTORS. This special resistor functions as a resistor under normal conditions, and as a fuse under overload conditions. It is used extensively as a surge-limiting resistor in voltage doubler circuits of TV receivers. Installation of an IRC Type FR fuse resistor in a TV set will prevent overloading of more valuable components and possible fire due to a short circuit. The compact, modern design of IRC fuse resistor measures only $1\tfrac{25}{64}''$ x $\tfrac{11}{32}''$ x $\tfrac{3}{8}''$. This unit is completely insulated in a rectangular ceramic case, and equipped with plug-in terminals. FR5.0—5 ohms, FR5.6—5.6 ohms, FR7.5—7.5 ohms.

LECTROHM, while manufacturing the standard vitreous line, is also producing whole new groups of types, each designed to solve a special problem. Miniaturization and printed circuit restrictions in space and ventilation no longer are complicated by conventional power resistor size standards. New coating materials and winding methods developed by LECTROHM permit an infinite variety of configurations yet retain operating and life characteristics expected of the finest grade vitreous enameled types. LECTROHM engineers will fit the resistor size and shape to your design.

EXPLANATION OF MALLORY TAPERS

TAPERS: Taper Number 1 is a modified logarithmic left hand taper in the carbon type of control and an approximation to this logarithmic taper in the wire-wound type. This taper should always be used in shunt circuits, as in usual antenna and audio circuits, or where only the center and left hand terminals are used.

Taper Number 2 is a right hand logarithmic taper in the carbon and an approximation in the wire-wound type. Used in series circuits, as in cathode voltage controls, or where only the center and right hand terminals are used.

Taper Number 4 is a linear taper. A linear "taper" is used wherever a control should be such that voltage change is proportional to the degree of rotation.

VITREOUS ENAMELED RHEOSTATS

Twelve sizes in wirewound, vitreous enameled rheostats are stocked by Ohmite distributors all over the country and at the Ohmite factory. This selection, the most extensive available to industry, covers ratings that meet the major portion of design, production and emergency needs. Ratings of 7½, 12½, 25, 50, 75, 100, 150, 225, 300, 500, 750 and 1000 watts are standard.

FEATURES OF CONSTRUCTION: Ohmite rheostats are designed to produce permanently smooth, close control. The construction is all ceramic and metal; there is nothing to smoke, char, shrink, or shift. All models have insulated shafts with provision to keep the rheostat from turning on the panel. The resistance wire is wound over a solid ceramic core. Each turn is a separate resistance step and is locked against shifting by vitreous enamel. The core and base are also bonded by vitreous enamel. The pivoted universal-action-mounted contact brush is of copper-graphite or silver-graphite on the heavier current rheostats. It rides upon a large flat surface and assures perfect contact without wear on the wire. Pressure at the contact and at the center lead are independent. Ohmite Rheostat Models H, J, G, K, L, P, and N, all marked Series A, are listed under the Underwriters' Laboratories Reexamination Service.

RATING: The current carrying capacities shown in the tables are for use in *free air;* when units are enclosed, these currents should be reduced possibly as much as 30% to 50%, depending upon the degree of ventilation. The rated current will cause the rheostat to dissipate its rated wattage when the full resistance is in the circuit.

MOLDED COMPOSITION POTENTIOMETERS, ½ and 2 WATTS

Used in commercial and military electronic applications where high quality and dependable performance are important. Type AB, 1⁵⁄₃₂" dia., is rated 2 watts at 70°C ambient and is available with ⅞" slotted shaft (CMU), 2" unslotted shaft (CU, CA, CB, CCU dual unit) and locking type slotted shaft (CLU). Type AS, a miniature unit ½" dia. rated ½ watt, is available only with locking type shaft.

Because of their molded composition elements, these units outlast and outperform film type units. Noise level is exceedingly low. Single control Type AB units extend ⅝" behind panel; dual control 1¹⁷⁄₆₄". Type AS miniature unit extends ¹¹⁄₁₆" behind panel. An SPST switch for single Type AB units is available. Units are dust and splash proof, fungus and corrosion resistant and meet the latest requirements of MIL-R-94. Styles CMU, CLU and Type AS conform respectively to MIL-R-94 Styles RV4N, RV4L, RV6L.

OHMITE® STOCK AXIAL-LEAD RESISTORS

Ohmite axial-lead, vitreous-enameled resistors are compact, wire-wound units available in *four stock sizes:* 1-Watt (9/16″ x 1/8″), 3-Watt (9/16″ x 1/4″), 5-Watt (1 1/16″ x 11/32″), and 10-Watt (1 15/16″ x 13/32″) . . . The resistance wire and terminal lead are both welded to the end cap, utilizing the patented Ohmite welding technique. All have 1½″ tinned wire leads, are simple to mount, and occupy small space.

Axial-lead resistors are especially suited for printed circuits, terminal board, and point-to-point wiring applications.

The standard resistance tolerance is ±5%. Resistance range for each size shown in price tables below.

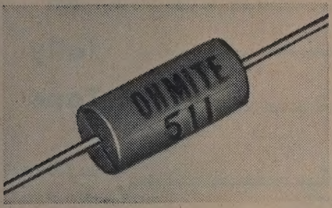
RITEOHM® TYPE 884 MOLDED WIREWOUND RESISTORS ± 1% TOLERANCE



These precision power resistors are furnished from stock in power ratings of 3, 5 and 10 watts depending upon resistance. Single layer wound on ceramic core, Type 884 units feature a pressure-molded jacket of tough, resilient, silicone-ceramic material. Negligible inductance at audio frequencies. Temperature coefficient of resistance is 0±20ppm/°C. Values shown are selected from MIL Standard MS90169, MIL-R-10509 and Bell Tel. Labs.

Resistance values marked * are derated in wattage because of maximum voltage gradient considerations. Even with these voltage limitations, however, the wattage ratings are still adequate for most precision applications. However, where wattage requirements dictate, the same value shown in a derated area for either the 3 or 5 watt sizes can be supplied in the next higher wattage as the case may be.

NEW OHM'S LAW CALCULATOR

Redesigned! This new, improved version of the famous Ohmite Ohm's Law Calculator — popular the world over with servicemen, engineers and students — now has scales for solving parallel resistance problems, AND a standard slide rule. More useful than ever! With one setting of the slide the calculator gives the answer to any Ohm's Law problem—reading directly in ohms, volts, amperes, and watts. Three of the new scales on the back provide a quick, one-setting means of solving parallel resistance problems. The slide rule scales will multiply, divide, find squares, and square roots.

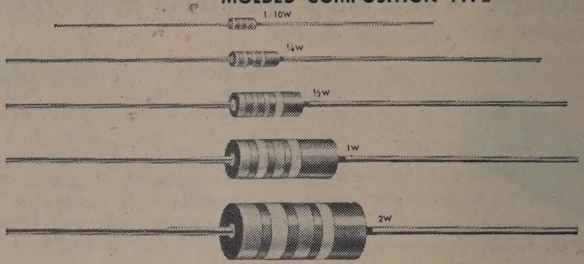
MOLDED COMPOSITION TYPE



on Tally Tape

(see below)

Now Includes MIL-R-11 Types

Ohmite's famous molded composition resistors. The ¼, ½, 1 and 2-watt sizes, conform respectively to Styles RC07, RC20, RC32 and RC42 of MIL-R-11C and meet all the requirements of this military specification.

Little Devils have molded insulation except for the 1/10 watt size which is coated with insulating material. Features: Great stability, low noise level, low voltage coefficient, high insulation breakdown voltage and rapid heat dissipation. They may be used at full rated wattage at 70°C (158°F) ambient temperature.

Available from stock in the standard EIA resistance values in the tolerances and resistance ranges shown in the price table below. Ratings for maximum continuous RMS voltage drop are high: 150 volts for 1/10 watt units, 250 volts for ¼ watt, 350 volts for ½ watt, 500 volts for 1 watt and 750 volts for 2 watt units.

STANDARD EIA VALUES

Figures in large, bold type are ±10% EIA values. *All* values listed are ±5% values. Price table lists the various "Little Devil" sizes and indicates the tolerances and resistance ranges in which they are supplied.

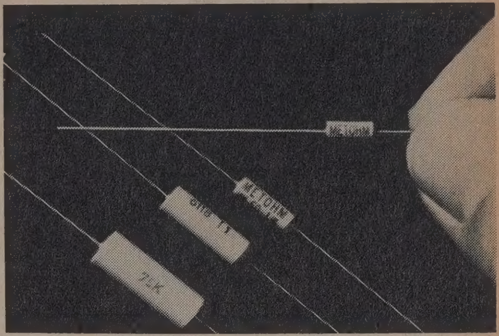
Metohm® RESISTORS
Metal Film Precision Type

THE STANDARD OF QUALITY FOR MILITARY AND INDUSTRIAL PURPOSES

FEATURES

- High stability and reliability
- Designed to exceed MIL-R-10509D
- Close resistance tolerance
- Wide range of resistance values
- Stock or made-to-order types
- 1/10, 1/8, 1/4 and 1/2 watt sizes

Exceeds MIL-R-10509D



In critical space-age electronic circuitry, METOHM metal film precision resistors guarantee high reliability, high stability, close accuracy, low TC and miniature size. Metohms are precision made under "white-room" conditions in the industry's most modern plant.

MIL SPECS. — All Metohm precision resistors are designed to exceed MIL-R-10509D char. B, C, D and E.

POWER RATING — is based on full rated load in an ambient of 125°C.

WELDABLE LEADS — gold plated Dumet leads and nickel "270" leads are available for weldable applications.

STOCK METOHMS — RN55, 60, 65 and 70 Metohm resistors, char .C, TC Code T2 (±50PPM) are stocked in MIL standard values listed below. Standard tolerance is ±1%.

MADE-TO-ORDER TYPES — see data in accompanying tables for non-stock resistors available in production order quantities.

Vitreous enameled wire-wound resistors built on a strong refractory core, and provided with low mounting brackets. Particularly suited for applications where space is limited. Specially adapted to stacking for networks.

The 20 watt Ministrip resistor is smaller in size than the standard Stripohms. They may be stacked by using 1/32" washers.

25-Watt — 50-Watt

The Ward Leonard 25-watt (Type 25R) and 50-watt (Type 50R) Ring Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance change is essential. Balanced contact arms, self-lubricating metal graphite contact shoes, and no backlash in the drive shaft combine to assure uniform contact pressure and smooth operation.
Standard shaft length for back-of-board mounting on ¼" panel.
Standard Resistance Tolerance ±10%.

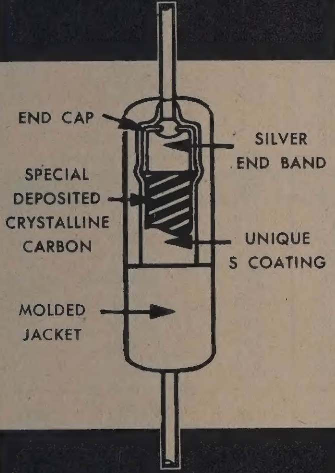
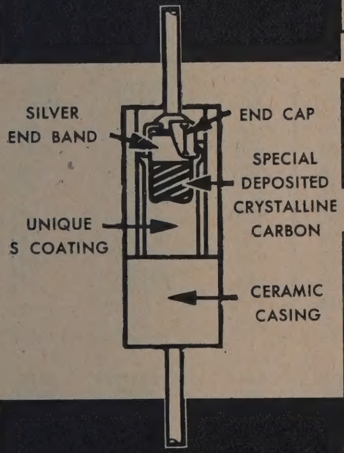
STANDARD DEPOSITED CARBON RESISTORS



MOLDED DEPOSITED CARBON RESISTORS



HERMETICALLY SEALED DEPOSITED CARBON RESISTORS

TRU-OHM

DEPOSITED CARBON FILM RESISTORS

are manufactured to exacting standards in a clinically-clean atmosphere in humidity controlled, air conditioned rooms. Reliability tested individually, each and every resistor must withstand up to twenty-five times the rated wattage for 1 sec. duration to pass exacting TRU-OHM final inspection standards.

The continuous process method employed by TRU-OHM provides a **completely uniform carbon coating** applied to special ceramic core material. For example, in applications where these resistors are subject to extremely high frequencies, the uniformity of the film element is of utmost importance.

Years of accumulated experience in manufacturing resistors have been coordinated to bring about the development of nearly diamond-hard films bonded so perfectly to the ceramic core that it is impervious to the most severe scratch tests.

Despite their sub-miniature size — ruggedness is built into TRU-OHM Deposited Resistors — try the twist test on leads — they will withstand three times the military spec required.

VESO RELIABILITY AND QUALITY CONTROL

Not one VECO product ever leaves the plant until it individually passes tests for reliability exceeding applicable specifications. VECO Quality Control Processes are even more stringent than required to be acceptable by government standards with resulting high stability and performance. VECO has been qualified and authorized by the Air Force because of its quality control program to ship Air Force contracts upon the authorization of VECO's own quality control department. This can be done without the presence of an AFQCR (Air Force Inspector) under the Air Force "SWOPI" program. VECO Quality Control Processes are accepted under MIL-Q-9858 standards.

VECO's strict adherence to specifications led to its participation in many programs of the Space Age requiring high reliability. A few such programs are Nike Zeus, Apollo, Project Mercury, Regulus I & II, etc., this experience in quality and reliability earned for VECO this honor. In addition to this, VECO on the basis of test and performance was chosen to participate on the spectacular, successful Bell System's communication satellite "Telstar I & II" and is featured in future Telstars yet to fly.

VECO HYPSOMETERS

(patent applied for)

Compact, lightweight instruments which are used to determine altitude by means of pressure. VECO Hypsometers, utilizing thermistors, act as transducers which convert pressure measurement to electrical resistance output. Can also be used as barometric standards.

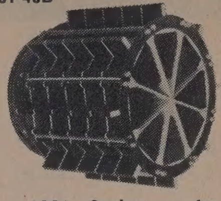
2401

2402

The **Model 2401** and **Model 2402** utilize a light compact integrated blower, which maintains the transistor shelves at minimum temperature even under conditions of high heat load. This modern highly efficient concept is achieved by means of a revolutionary production method which permits the attachment of many fins to a base, giving a large surface area for cooling. Banks of four, eight, twelve or sixteen heat sinks may be provided with each sink electrically insulated from the other.

PRICES START AT $4.10

2601-40B



PRICES START AT $5.10

The **2601 Series** employs the same unique design of the **2401.** Within a relatively small physical area, up to 64 sinks may be mounted to one fan, insulated electrically, separated physically, with each mounted component completely accessible for servicing, replacement, or experimental monitoring.

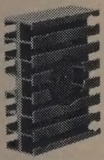
2501



2502

The **2501. 2502,** and **2503 Heat Sinks,** as a result of the patented "T" construction, have unusually large surface areas providing the same dissipation as commercial units twice the size. They are designed to be used where the maximum dissipation is needed in the smallest physical area. A variety of semi-conductor hole patterns, lengths, and mounting kits are available on request.

2505 $.95

The **2504, 2505, 2506, 2510, 2515** are designed to answer the need of versatile, inexpensive, highly efficient heat sinks. They incorporate a number of design features including universal transistor hole patterns. More efficient than their commercial counterparts, the low selling prices of these units make it unnecessary and undesirable to utilize standard commercial units or design your own units. These models are also available in a variety of lengths and hole patterns.

2507

The **Model 2507 Heat Sink** is designed to be used in systems where the efficient operation of high power components demands a superior system of free convection cooling. It is ideally suited for use with high power silicon rectifiers with a mounting surface wide enough to fit all of the larger semiconductor devices. The mounted components remain completely accessible for wiring, monitoring, or replacement.

The versatility and high thermal efficiency of the **2509** heat sink stack simplifies the majority of problems in circuit design and component packaging.

Units are available, assembled or unassembled, to suit the customers needs.

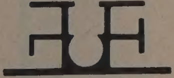
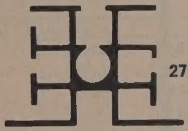
2701....$.65



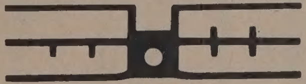
2702....$.70

This new series of small, light natural convection heat sinks provide the maximum ratio of heat dissipation to volume occupied. Their configuration a major improvement over conventional designs, — the fins are designed to permit optimum free air flow and minimum conduction losses.

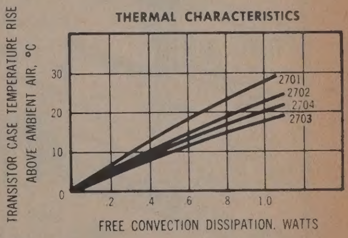
Model 2700 heat sinks will accommodate both the TO-5 and the TO-9 transistor cases. Mounting holes for other transistors are also made to customer specifications.

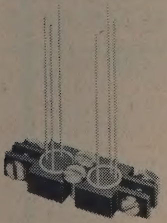


2703....$.70



2704....$.70





2802....$.85

2801....$.65

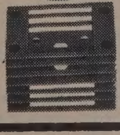
The **Model 2800** series heat sinks provide a combination of effective heat dissipation with easy, secure mounting in a compact space.

Unlike conventional transistor mounting clips which cannot function adequately as heat sinks, the **Model 2800** series effectively conduct heat from the transistor by providing sufficiently large surface contact with the chassis or other metallic mounting area.

Both **Model 2801** (1 transistor heat sink) and **Model 2802** (2 transistor heat sink) are designed to accommodate TO-5 and TO-9 transistor cases, but mounting holes for other sizes are available to customer specifications.

2201....$.12

2901



2902

Although the **Model 2201** retains the proven reliability of the "gear" design, it has by virtue of its angled fins, increased the area which can be used in natural convection. This additional area results in an efficiency increase of approximately 10% without increasing the overall size of the Heat Sink.

The **2900** series heat sinks were designed to be used either as natural convection heat dissipators or with forced air in very compact assemblies. These units are easily mounted and extremely well suited for very high packing densities. In particular, they are suited for circuit board applications. The **2900** series heat sinks are manufactured of copper with a black ebanol surface finish.

Physical dimensions: 2901 ⁹⁄₁₆ x 1¹³⁄₁₆ dia.
2902 1 x 1¹⁄₁₆ x 1½

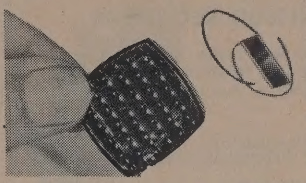
EXPERIMENTER TYPE CELLS



For the experimenter and hobbyist. A selected line, low priced—yet efficient, rugged and easy to mount and connect. These cells and sun batteries may be used for powering of transistorized radios, building light meters, operating small motors from sunlight, etc. Selenium cells have a spectral response similar to the human eye, thus are used extensively in light meters. Silicon cells have higher light conversion efficiency. They are the same as used in satellites.

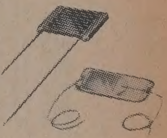
CADMIUM SULPHIDE PHOTO CONDUCTIVE CELLS



These cells do not generate electricity, but are "light-sensitive resistors." Used for operating relays, counting devices, door openers, turning on street lights, etc. Type CS-020-G8 is sealed in glass. Types CS-120-V6 and V16 are unmounted and will operate directly on 117 volt AC or DC. The type CS-120 cell is enclosed in a plastic case, same as shown under experimental cells on top of page. Most popular item.

The hermetically sealed rectifiers on this page are conservatively rated, if mounted on a chassis or cooling fin of 3" x 3' x 1/16" (copper or aluminum). Transient voltages must not exceed the rated PRV of the device selected. The use of transient voltage suppressors, such as Klip-Sels to limit the transient voltages is recommended.

SELENIUM BATTERY CHARGER RECTIFIER

Type JD 4346B is the most universal rectifier for commercial "fast chargers" as used in service stations. It fits most models without circuit or mechanical modifications.

Single plate rectifiers are used for replacement of low-current chargers such as used at home, as "trickle" type in garages and for constant current models. By using singe plates of proper size, any current rating and circuit configuration (e.g. center tap, bridge, etc.) may be assembled.

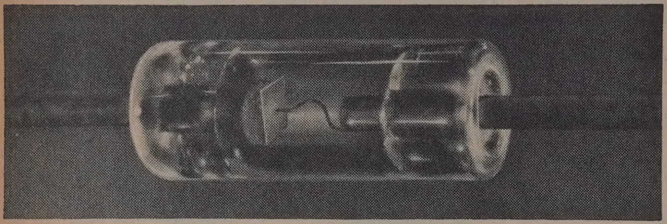
STOCK SUBMINIATURE GERMANIUM DIODES



Ohmite subminiature, gold bonded (gold whisker wire welded to germanium) germanium diodes are hermetically sealed in glass. These advanced diodes feature:

1. Unusual stability built in through temperature cycling, aging, and 100% shock test.
2. Wide operating temperature range: —85°F. through 194°F.
3. The absolute in moisture and gas resistance.

All Ohmite diodes are leak tested at 100 psi hydrostatic pressure, subjected to mechanical and temperature shock, and checked for vibration stability through production random sampling. Ohmite diodes have standard EIA color coding, beginning at the cathode (germanium pellet) end. Rating: 80 mw at 68°F. Capacitance: approximately .5 μμf. Storage temperature: to 248°F.

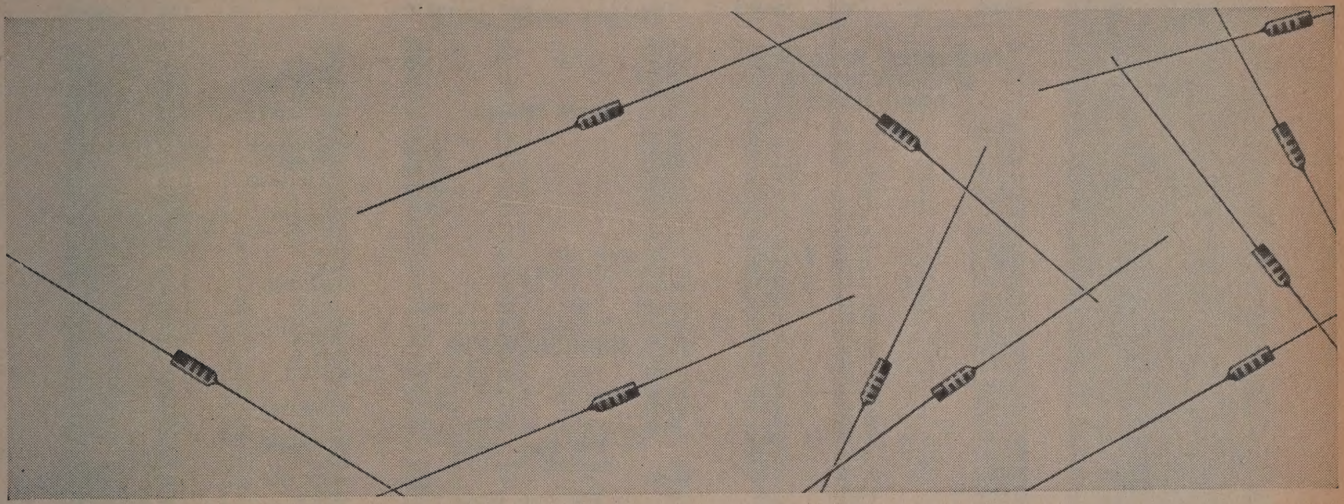
STOCK SUBMINIATURE SILICON DIODES

FOR GENERAL PURPOSE AND LOW POWER RECTIFIER USE



Ohmite silicon diodes employ alloy and diffusion methods of junction formation. The entire assembly is hermetically sealed in glass and is light-shielded. All units are subjected to severe mechanical and environmental checks and are tested to exacting electrical requirements with liberal safety factors. Power rating is 400 milliwatts at 20°C except where otherwise indicated. Operating temperature range is –65°C to +150°C. Ohmite diodes are distinguished for long life, superior operating characteristics, and excellent stability. No effort is spared at Ohmite to improve the reliability of diodes shipped to you from our factory. Hundreds of other diodes are available on ten day delivery or made to order (request Ohmite Catalog 804).

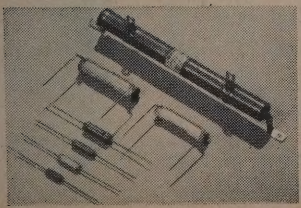
OHMITE R.F. PLATE CHOKES



This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units are wound on steatite tubes. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

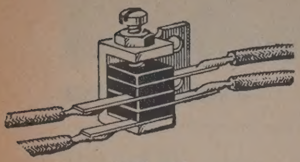
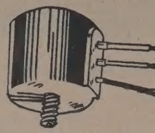
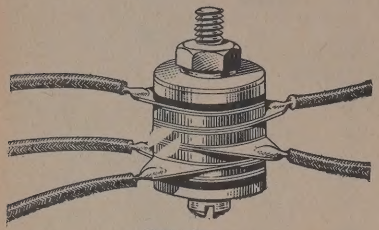
SCHAUER INSTRUMENT RECTIFIERS



TYPE A4A



TYPE BP2B



TYPE C4A

Schauer copper oxide rectifiers for instrument and other uses are processed and individually tested to meet the requirements of the user. Versatile processing techniques make possible variations in characteristics for special or unusual applications. Each rectifier is rated conservatively for long life and dependable operation. Lead lengths to customer specifications.

"A" SIZE CELLS have good frequency response above the audio range and can be used at higher frequencies. Recommended for meter applications needing 1MA or less for operation. Can be used for other applications requiring up to 5MA.

"B" SIZE CELLS (encapsulated) are for meter, relay and other applications requiring 1MA up to their maximum rating. Recommended for commercial and low audio frequency operation.

"C" SIZE CELLS are for general applications requiring larger output currents, and operation of meters, relays and other apparatus. Special process cells for varistor applications.

Write, wire or telephone for complete information. We welcome your inquiries concerning any special rectification problem. Schauer has been manufacturing high quality, dry-disc rectifiers since 1930.

NOTE: The Schauer Manufacturing Corp. is the exclusive manufacturer of replacement Westinghouse copper oxide rectifiers

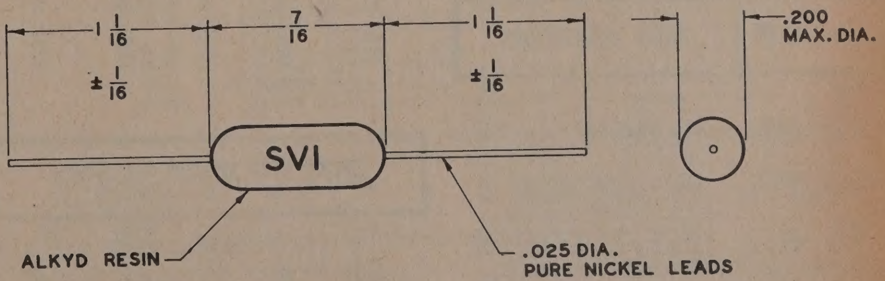
SV1 Silicon Varistor as compared in size to 25¢ piece. Chart shows its I vs E characteristics over four decades.

SCHAUER SV1 SILICON VARISTOR

SV1 Varistor consists of matched silicon junctions connected in parallel and oppositely poled. This voltage variable resistance goes through four decades of current for a half volt change in signal and makes possible its use as a single component to convert linear AC or DC information into logarithmic information following the curve $I_{ma} = e^{26(E-.59)}$ between the range I = .02 ma to 200 ma.

ELECTRICAL CHARACTERISTICS — Test limits: 50 microamperes max. at .2V D.C., 225 milliamperes min. at 1.0V D.C. Dissipation: ¾ watt at 25°C, ¼ watt at 100°C. Maximum ½ cycle surge current, 25 amps. peak.

SV1 is encapsulated with an alkyd molding compound. An inner epoxy seal, long leakage paths, and high pressure molding assure reliable performance in all environments. Prices, 1-99: $0.49 each.



Dimensions of SV1 Varistor. Also applies to Schauer ½ watt Zener Diodes. Zener cathode terminal is marked by red dot.

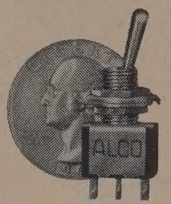
HIGH 5 AMP RATING AT 115 VAC ULTRA-MINIATURE ½″ SIZE



A new series of high-quality, ultra-miniature toggle switches, designed by ALCO, is ideally suited for limited space requirements. Conservatively rated at 5 amperes @ 115 VAC, and capable of carrying a 100% overload. Contacts and terminals are of solid silver to assure many years of service. Extremely small case size makes these switches ideal for miniature equipment which have rear panel space limitations.

Insulating Resistance:	Over 1000 megohms @ 500 VDC.
Voltage Breakdown:	Over 1000 volts @ 60 cycles.
Life Cycle:	Well over 80,000 on-off actions.
Moisture Resistance:	Over 8 megohms after 48 hours at 40°C, and humidity of 95%.
Heat Resistance:	One Hour @ 140°C.
Case Material:	Black phenol resin.
Contacts:	Solid silver.
Bushing Size:	Standard ¼ - 40, usable up to ¼″ panel thickness.

COLOR-CODED PLASTIC CAP SERIES

ALCO's revolutionary feature of color-coded, plastic caps for toggle switches has already proved to be an invaluable aid in aircraft installations. Caps are removable from handle, and are normally supplied in white, but are also available in optional colors of red, blue, and black. Physical and electrical specifications are described above.

MS and AN types use internal sand and dust toggle seals. MS25098 and MS25100 series call for solder terminals only. MS types to MIL-S-3950A (recommended) have internal toggle seals to meet 15 ft. water submersion test. For heavy duty switches, MIL-S-3950A (-21 and higher) in MS25061, MS35058 and MS35059 series call for screw terminals only. These terminals are prepared for soldering and can be soldered when screw is removed.

Birnbach CUTLER – HAMMER SWITCHES

POSITIVE ACTION SWITCHES

Especially designed for aircraft, missile and electronic applications. Made in two types—one with lever seals, the other environment sealed. Lever seal is bonded to the bushing and lever—will withstand a 15 ft. head of water, or between 6.5 to 7 lbs. per sq. inch. The environment sealed switches have seals under each contact and also a seal between switch base and the shell and are designed to pass a glycol temp. cycling test submerged for 20,000 operations per minute. The contact wiping action keeps contacts clean and smooth. Superior design, smooth operation. Screw terminals are tin-dipped to facilitate soldering if required.

Lever Lock Switches—One, Two, Four Pole—Sealed Lever—MS 25125-6-7 Series— Per MIL-S-3950A

This series incorporates a lever lock mechanism designed to prevent accidental operation, thereby eliminating need for switch guards. The assembly of 2 die cast caps and a retaining clip spring assembled after the switch is mounted makes possible the locking feature. Switch is locked into position by the lever falling in position into deep slots in die cast caps. To operate switch from locked position the lever must be pulled straight out and moved to desired position.

MAGNETIC PROXIMITY SWITCHES

Precision, fast-acting devices, adaptable to sequential control functions on machine tools, packaging, material handling and equipment or for similar industrial devices. Rugged construction, encapsulated to assure freedom from contamination by cutting oils, dust, powder, metal chips, etc., this series will operate up to hundreds of millions of cycles at temperature ranges from —30°C to +105°C. Switches will actuate when brought into proximity with ferrous metals or other magnetic materials. Operating sensitivity in nom. ⅛" make, ½" break. No mechanical linkage is required for operation. Typical actuators include rotating cams, wheels and indexing tables, reciprocating arms, push rods, die sets, jaws and assembly line objects such as food and beverage cans, stampings and components. Speed (max.): 200 cycles/sec., repeatability within .005". Switch elements are hermetically sealed in glass, then unit is potted in epoxy resin. Case is special rubber and plastic compounding which is impervious to oil, water, gas and all common solvents.

COUNTING — POSITION LIMITING — SEQUENCE CONTROL HERMETICALLY SEALED—MOUNTS IN ANY POSITION—NO MECHANICAL LINKAGE NECESSARY.

Fibre Tube. Silverplated indicating pin extends from end of fuse when fuse is blown. This pin can also be used to actuate a signal by using fuses in BUSS HKA Fuseholders or BUSS Signal Fuse Blocks. GLD fuses in sizes larger than 5 amperes have dual tube construction. They can be used in BUSS Signal Fuse Blocks but not in HKA Fuseholders.

GBA FUSES

GBA fuses are the same as BUSS GLD fuses EXCEPT that the indicating pin is RED. This results in a more vivid indication of an open fuse when the fuses are used in BUSS HLD fuseholders.

GBA fuses have same electrical and physical characteristics as BUSS GLD fuses. They are made in the same ampere sizes up to 5 ampere, and are also priced the same.

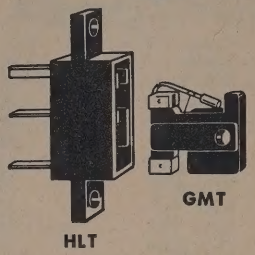
BUSS GMT Fuses — HLT Fuseholders

Signal Indicating

Alarm Activating



For multiple circuit apparatus where space is at a premium

GMT fuses and HLT fuseholders permit multiple mounting of fuses in limited space, for protection of communication equipment, business machines, computers, control circuits or any equipment operating at 300 volts or less.

Holders take panel mounting space of only 1/4 inch horizontal by 1 15/32 inches vertical.

Fuses give visual indication when blown by release of a spring indicator. The spring carries a colored plastic flag, in a different color for each fuse ampere rating.

The indicator spring when released makes contact with an alarm terminal in the fuseholder, which can be connected to activate a signal circuit.

Blown fuses are readily replaced without use of insulated tools. When mounted on minimum centers, removal of fuse is easy by use of a wire hook.

BUSS LIMITRON FUSES

For Protection of Semi-Conductor Rectifiers

These BUSS Limitron fuses are especially designed for the protection of semi-conductor rectifiers. They provide extremely fast opening on overload and fault currents, with a high degree of restriction of the let-thru current.

If each diode is protected by a BUSS Limitron fuse, the fuse will open very quickly when the current drawn exceeds the rating of the diode.

Thus when a short-circuit occurs in a diode the fuse opens and takes that diode out of the circuit. This protects other good diodes in the rectifier which might otherwise be damaged.

For time-current characteristic charts ask for BUSS Limitron fuse bulletin HLS.

Test specification for all types of BUSS rectifier fuses — carry 100% of rating; open at 1000 seconds on overloads between 120% and 180% of rating; open within 1 second at 250% of rating.

Snap-Action, Momentary Contact

The exclusive Hetherington snap-action mechanism reduces arcing and contact wear...provides far greater current capacity than the small sizes of these switches would indicate. Mechanism enclosed in dust and moisture-resistant anodized aluminum housings (phenolic in B2001 & B2002). 1-piece terminals and contacts firmly anchored to bases. Many types meet JAN and MIL Specs for aviation and military requirements.

Features and dimensions are subject to change based on engineering refinements. If dimensions or specifications are critical, obtain drawings from Control Switch engineering department.

Especially designed for machine control, automation circuitry and sequencing operation. Aluminum diecast housing protects switch from damage, dirt and corrosion, simplifies mounting on equipment. Some models available with neoprene boot on plunger for protection from dirt, oil and metal chips. Impulse models eliminate need for one-way dogs, complicated relays and timers. As plunger is depressed, switch completes electrical circuit during pre-set section of travel ("ON" period), but does not make circuit on return stroke. Case size: 2″ (plus plunger length) x 1 1/32″ x 2 3/16″. Rating: 10 amps, 125/250 VAC. Circuit: SPNO.

FLUSH MOUNTING—Cont'd

LEVER LOCK TYPE

Cat. No. 8271

This line of switches is identical to the standard flush mounting types as listed on the previous page except that they have, in addition to the standard features, a lever lock design which permits the lever to be locked into position. The operating lever must be pulled upward before it can be moved from a locked position.

All switches have screw type terminals.

Nominal Rating — 10 Amp. — 115 V. A-c, 20 Amp. —28 V. D-c. For specific ratings for various loads and voltages see your C-H representative. Max. weight 0.14 - 0.24 lb.

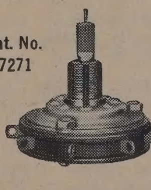
ROTARY SELECTOR SWITCH



Cat. No. 7271

The C-H single or multi wafer selector switch is designed for applications where a large number of circuits must be controlled in consecutive steps. Switches have an indexing action which gives a positive "feel" as the shaft is rotated. Switches can be furnished with from 1 to 6 wafers with each wafer having 8 positions — 7 "on" and 1 "off". A total of 42 circuits can be controlled by one 6 wafer switch.

Nominal Rating — 5 Amp. — 28 V. D-c, 115 V. A-c For specific ratings for various loads and voltages see your C-H representative. One hole mounting. Bushing length — 15/32". Bushing dia. 15/32". Flatted shaft has ½" extension.

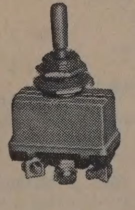
POSITIVE ACTION

ONE HOLE MOUNTING



Cat. No. 8836, 8840

The operating mechanism employed in the C-H line of "positive action" switches has a direct coupling arrangement between the operating lever and moving contacts which permit positive breaking action and still allows the contacts to move independently of the operating lever. The switching action takes place in less than 1° of movement on the operating lever. Once the contact movement is started the motion cannot be stopped until the switching is completed.

Cat. No. 8844, 8847

Switches are available with either the lever seal or environment seal. Both feature a silicone rubber seal bonded to the bushing and operating lever. They also are available in standard lever models or lever lock types. The lever lock switches have an integral bushing design which permits the operating lever to be locked into position. In order to move the lever from a locked position it must be pulled upward.

Nominal Rating — 25 Amp. — 28 V. D-c, 115 V. A-c on resistive loads. Max weight 0.1 - 0.2 lb. Bushing dia. 15/32". Bushing length 15/32".

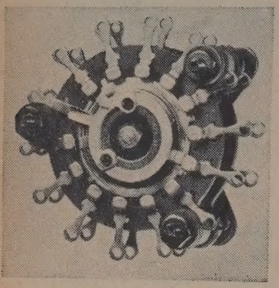
INSTRUMENT AND TESTER-TYPE ROTARY SWITCHES

14- and 20-Position — Single and Multi-Gang — Shorting and Non-Shorting

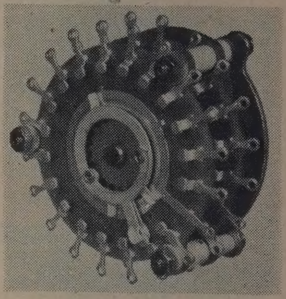


SS-14-2 Laminated

• USES — J-B-T Instrument-type Rotary Selector Switches are extensively used in quality test equipment, portable instruments, inspection setups, military or civilian avionics wherever trouble-free, dependable performance is of major importance. Available as a 14- or 20-position in laminated construction shown here or molded types described on opposite page—the design gives extra contacts in minimum space. One to six decks.

• FEATURES

Reliability — Rigid, 3-post deck suspension, instead of the usual 2; all current carrying parts are brass or phosphor bronze, silver flashed and then heavily plated with fine silver to meet 100 hour salt spray test; ball bearing action, beryllium-copper balanced spring (SS-14); leaf type (SS-20), and sharp detent assure positive indexing. Springs are replaceable without disturbing soldered connections. Laminated plastic decks and rotors are selected for maximum mechanical and dielectric strength. Insulation resistance above 50,000 megohms.



SS-20-2 Laminated

Low Contact Loss — Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less.

Ample Dielectric (Conservatively Rated) — Carries 1 amp., 125 volts VAC, inductive load; maximum momentary capacity (not make-and-break), 5 amp, AC or DC; maximum voltage between contacts 1500 volts AC, R.M.S.; between decks and ground, 2000 volts AC, R.M.S.

Military or Commercial Variations — The following are typical of switches supplied on special order at extra cost: (a) laminated plastic, Type PBE-P per Spec. MIL-P-3115B; (b) fungus-proofing by vacuum impregnation of rotors, decks, spacers, and ceramic spacers using approved fungicides; (c) hot tin dip on contact surfaces to be soldered; (d) 14 or 20 live positions, no off (add suffix F, as SS-14-2F or SS-20-1F); (e) common position in non-standard location. For description of SS-14 materials, finishes, and government-quality features, see Print SK-42, Rev. B for SS-14, and Print SK-116 Rev. A for SS-20.

BASIC 14-POSITION (SS-14): 13 circuits and "off" per deck in 2" circle for compactness, angular indexing 25°43′. **1¼" Bar Knob (KN-14)** supplied only on individually boxed units—not on bulk orders unless specified. **Collector arm** normally placed directly opposite to flat of shaft so that knob pointer points to live contact. **Contact lugs** and common lugs positioned as shown below, 13 contacts per deck. **One to six decks;** for each additional deck (or gang) add 5/16" to depth. **Continuous rotation type** supplied unless otherwise specified. **Adjustable Stop** normally is supplied on standard cataloged switches. **Fixed Stops** can be supplied on quantity orders at moderate cost. **Panel locator** positioned as shown unless otherwise specified on bulk orders.

BASIC 20-POSITION (SS-20): 19 Circuits and "off" per deck in 2-23/32" circle for compactness, angular indexing 18°. **2" Bar Knob (KN-16)** supplied on individually boxed units—not on bulk orders unless specified. **Collector arm** normally placed directly opposite to flat of shaft so that knob pointer points to live contact. **Contact lugs** and common lugs positioned as shown below, 19 live positions per deck, standard. **One to six decks:** for each additional deck or gang add 5/16" to depth. **Continuous rotation** type supplied unless otherwise specified. **Panel locator** positioned as shown; can be modified on bulk orders.

COMBINATIONS IN SS-14 and SS-20 SERIES: Besides the military and commercial variations listed above, shorting and non-shorting decks can be assembled on the same switch shaft. Reference to the sketch below will be helpful in numbering decks and contacts when ordering non-standard assemblies. Specialized requirements for stainless steel shafts, no flats or double-flats on shaft, longer projections beyond bushing, and other variations can also be supplied, with necessarily longer delivery time and additional cost.

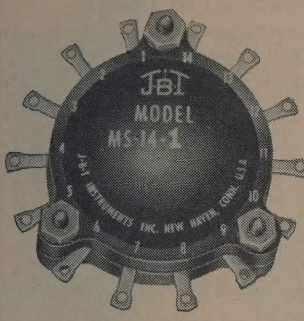
MOLDED SWITCHES

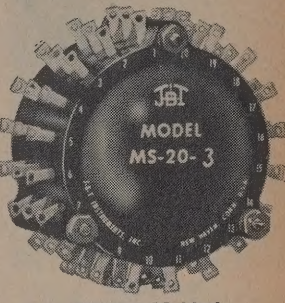
J-B-T INSTRUMENTS, INC., NEW HAVEN 8, CONN.

FULLY-ENCLOSED INSTRUMENT AND TESTER-TYPE ROTARY SWITCHES

Standard or Bonded Ruggedized Types—14- and 20-Position



MS-14-1 Molded



MS-20-3 Molded

- **All moving contacts enclosed—minimizes dirt and corrosion; 3-post deck suspension for rigidity; double-grip collector arms for positive contact; and rectangular drive shaft for precision indexing.**
- **Interchangeable, electrically and mechanically, with SS-14 and SS-20 laminated switches.**

FEATURES: See opposite page on SS types of laminated switches for current carrying capacity and voltage breakdown, also features such as heavy fine silver plating to meet 100-hour salt-spray testing; compact design; .007 ohm average contact resistance, and insulation resistance above 50,000 megohms. Besides fully enclosing all moving parts, the molded switches differ from the laminated construction in the design of the detent mechanism, but both types provide rigid 3-post construction and the positive indexing which clearly identify the quality of J-B-T switches. Test results are available on request covering certain procedures of MIL-E-5272A on insulation resistance; high and low temperature and temperature shock; humidity; altitude; salt spray; vibration; fungus resistance; rain; sand and dust; explosion; shock; and endurance values. (Ratings for MS-20-6DTS Types differ somewhat.)

★★★ **BONDED RUGGEDIZED TYPES**—As indicated in the tables, all molded rotary switches may be ordered with bonded construction as MS-14B or MS-20B types using cured laminations for ruggedization, shockproofing and further enclosure. Add cost of 35¢ per deck to catalog price of basic switch. Thus, 2-deck switch is MS-14B-2 at $3.80. Bonding adds approximately 1/64″ per deck.

BASIC 14-POSITION MOLDED (MS-14): 13 circuits and "off" per deck in 2-3/32″ circle for compactness. **Molded end cover** regularly supplied. 1½″ **Bar knob (KN-14)** included with individually boxed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft, so that knob pointer points to live contact. **Common or "off"** contact lug is rounded and bent down for ready identification. **Extra decks** add 19/64″ per deck (or gang) to depth; for 7 decks and over add 1/2″ to depth for shaft support and 1/64″ per deck for bonding; if adjustable stop type also add 5/32″ to length. **Continuous rotation type** supplied unless adjustable stop (type MAS) is ordered or, on quantity orders, pre-set fixed stops (type MPS) are specified. **Panel locator** is available at extra cost on quantity orders when specified; on MS-14-4 and MS-14-6, extra hex nut and longer screw can be supplied for inverting supporting screw nearest common, thus converting into panel locator. **Complete dimensions:** for MS-14 switches, 1 to 6 decks, request Print SK-111, Rev. D, for 7 decks and over, SK-112, Rev. B.

BASIC 20-POSITION MOLDED (MS-20): 19 circuits and "off" per deck in 2-5/8″ circle for compactness. **Molded end cover** regularly supplied. **2″ Bar knob (KN-16)** included with individually boxed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft so that knob pointer points to live contact. **Common or "off" contact lug** is rounded and bent down for ready identification. **Extra decks** add 19/64″ per deck to depth and, if 7 decks or more, 1/2″ for shaft support and 1/64″ per deck for bonding. **Continuous rotation type** supplied; on quantity order, pre-set fixed stops (type MPS) are available. **Panel locator** available at extra cost on quantity orders when specified; on MS-20-4 and MS-20-6, extra hex nut and longer screw can be supplied for inverting supporting screw nearest common, thus converting into panel locator. **Complete dimensions:** for MS-20 switches, 1 to 6 decks, request Print SK-113, Rev. D; for 7 decks and over, SK-114 Rev. C.

SS-14-1L4F-2
Two-Deck Lever-Action Switch

SINGLE DECK, POSITIVE INDEXING, 3- and 4-POSITION. These lever switches are derived from the J-B-T SS-14 instrument-type rotaries. Specified for tube checkers, inspection equipment, communications systems, control consoles, and other uses where quality is important. 4-position types are interchangeable with 3-position except in length of throw, and provide for an extra circuit. Individually-boxed switches come with mounting hardware and KN-17 knob as illustrated; bulk shipments, without knobs. Spacing between centers: recommended ¾″; minimum 9/16″. For dimensions, see drawing below. **Spring Return Type.** Single deck, 3-position switches may also be ordered with spring return. Lever returns to position 11, giving momentary action at positions 9 and 10.

TWO DECK. Same basic construction and packaging as single deck. Spacing between centers: recommended, 15/16″; minimum, 13/16″. ⅜″ between decks matches TV twinlead wires.

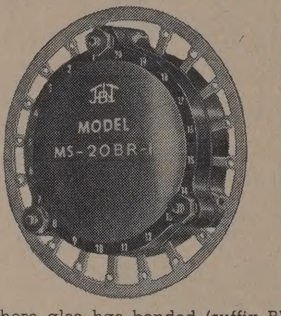
NEW IDEA: RING-CONTACT SWITCHES



Perfect connections between adjacent switch contacts are assured because this distinctive design needs no soldered jumpers. An integral ring which holds together all the contacts on each deck can be snipped wherever wanted—to save valuable time in development and pilot runs. For production lots, J-B-T can supply various combinations of joined and unjoined contacts to slash the user's assembly costs and build-in quality. The ring-contact adds 7/32″ o.d. to the MS-14 or MS-20 types listed on page 1275 (prints SK-88 Rev. C and SK-89 Rev. C respectively). The MS-20BR-1 shown here also has bonded (suffix B) construction. Switches listed below are normally available. Others such as 3-decks, 6-decks, shorting, etc., require substantial lead time.

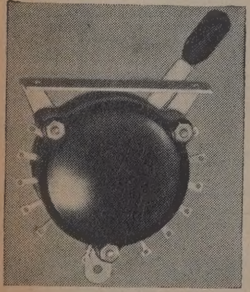
5- & 6-Position Lever Switch



MOLDED 5- and 6-POSITION, POSITIVE-INDEXING. Designers and servicemen now have available 5 or 6 live positions, two circuits per deck, in an enclosed lustrous black molded construction. Both switches are adapted from the MS-20 series and have similar electrical characteristics. Besides sound systems, these models can simplify circuitry for control, inspection, test, experimental, and hobby purposes. Individually-boxed switches come with mounting hardware and KN-20 threaded black molded knob; bulk shipments, without knobs. For mounting data see SK-64, Rev. H on 5-position and SK-119, Rev. B on 6-position.

HEAVY DUTY—SINGLE-, DOUBLE-, & 4-POLE—GOVERNMENT QUALITY

OVER 130 MODELS OF MIL (MS), AN, AND JAN (ST) TYPES

• **ALL HEAVY DUTY MS and AN** models use solid **coin silver contacts and rocker arms,** exclusive in J-B-T construction, to add overload protection and keep contact resistance under .005 ohms. These and other features more than pay for themselves in trouble-free operation whether in normal use or exceptional environments.

MIL-S-3950A SERIES — Single-pole MS35058 with suffix —21 and above, and double-pole MS35059 types with suffix —21 and above are recommended when maximum reliability is required. Temperature, endurance, and altitude requirements exceed earlier MS types (suffix —1 to —19), AN3021 and AN3027 switches to MIL-S-6745, and ST styles to JAN-S-23 and MIL-S-21195A-(Ships). All MS switches contain a silicone rubber bushing seal to meet sand and dust and 15-foot head of water submersion tests.

NOMINAL RATINGS: 20 Amp. at 125 VAC, 10 Amp. at 250 VAC.

OUTSTANDING 4-POLE SERIES

• There is no mistaking the light brown color and silver printing of these distinctive J-B-T 4-pole heavy-duty switches. The superior molded body, chosen after extensive tests, features high arc resistance and low shrinkage. As a result the switches exceed the rigorous electrical endurance requirements of MS-25068.

Equally important, the internal construction uses rocker arms and contacts made of solid coin silver (not clad or brazed). The 8 models listed here have silicone rubber bushing seals and solderable 6-32 screw terminals, the same as other heavy-duty MS switches.

NOTE A: MS and AN types use internal sand and dust toggle seal and other high performance features involving extra cost over ST types. MS types to MIL-S-3950A have internal toggle seal to meet 15 ft. water submersion test. MIL-S-3950 models are superseded by MIL-S-3950A models.
NOTE B: For heavy-duty switches in the MS25068, MS35058, and MS35059 Series, MIL-S-3950A calls for SCREW TERMINALS ONLY. These terminals have SOLDERABLE FINISH and may be soldered after removal of screw.

● **MEDIUM DUTY** describes the current-carrying capacity—nominally 6 amp. at 125 VAC, 3 amp, at 250 VAC—rather than the life characteristics. Self-wiping heavily silver-plated double-grip contacts provide exceptional reliability. Typical uses: instruments, data processing, and communications circuits.

NEW DESIGN FOR MS25098 & MS25100—Significant internal changes now provide fast break, wide gap, and increased insulation values, to surpass the severe endurance tests of MIL-S-3950A. For example, after 20,000 cycles of operation at 65,000' altitude with resistive load of 5 amps. at 125 VDC, contact resistance was well within the permissible limits. This development is especially important for the double-throw models MS25098-23 and MS25100-23. All MS medium-duty models contain: (a) silicone rubber bushing seal for sand, dust, and 15-foot head of water submersion tests, and (b) case-to-terminal sealing.

SIZE AND TERMINALS—Whether MS series to latest MIL-S-3950A, or ST series to prior Specifications JAN-S-23, MIL-S-21195A(Ships), or DDAX drawings, all have solder terminals. Bushings are 15/32" (except as noted †).

These devices are extensively used in selective calling mobile communication equipment, remote data transmission, and simultaneous or sequential coding and decoding. For complete information request Bulletin 162R.

RR-A11- and RR-A10- types frequency sensitive electro-mechanical relays (decoders) are highly stable, accurate, and reliable control devices. These units intermittently make and break contacts when a signal of the same frequency as the tuned reed is applied to the relay driving coil. Although the reed has a high Q, the bandwidth at which the relay responds will be proportional to the input signal level.

RO-B Oscillator Controls (sometimes known as tone generators or encoders) are dual-reed units internally shock mounted and of sealed construction. These units control the frequency of oscillation in vacuum tube or transistor oscillator circuits. The RO-B Type oscillator control is recommended where accurate and stable AC signals are required. **RR-C Types** are internally shock mounted resonant reed relays. These types are square, sealed, plug-in units with 7 pin, miniature plug. **RO-C Types** are single reed, internally shock mounted oscillator controls for applications where space saving is of importance. Dimensionally these units are identical to RR-C relays.

LICON®
PRECISION SNAP-ACTION SWITCHES

LICON® "DOUBLE-BREAK" ACTION

Type 11-204

A unique approach to the concept of double-break switching is the common denominator in a wide line of Licon miniature switches that speak for themselves . . . well over 20 million times. The Licon difference is in design and materials. Dual non-stressed blades and low-rate simple coil springs put life in the snap action. Double-break contacts increase the interrupting ability by providing eight surfaces and two gaps to boost capacity and life. Long-stroke wiping keeps the action alive, "cleans" contacts every actuation, minimizes chances of contact weld.

The LINEMASTER LEKTRO-LOK SWITCH

#L-2-S

#L-4-S

Small, sensitive, automatically safe

Particularly ideal for transmission equipment!

Mechanical Interlock allows only one circuit to function at a time—and you can depend on it! LEKTRO-LOK operates on the teeter-totter system, with selective circuits. Pressure on one side actuates one circuit, release of pressure automatically returns switch to normal "off" position. Pressure on the other side is required before second switch is actuated, independent of first. Yet LEKTRO-LOK requires only a single cord—eliminates costly harness assemblies! Rugged stamped metal housing, black crackle finish. Weight, 10 ozs. 5" long, 2¾" wide, 1¼" high. Single pole, double throw. Rating (A.C. only) 15 amps at 125 volts, 15 amps. at 250 volts.

The L-4-S has a DPDT circuit on each side and is rated at 10 amps 125 VAC, 5 amps 250 VAC.

LIMITED CURRENT FUSES & HOLDERS

A new approach to circuit protection completely eliminating the possibility of overfusing circuits. This has been accomplished by a combination of three different fuse lengths and seven different widths of bayonet locking tabs on the fuse caps.

The Limited Current Fuse Holder is designed to accept only the size, amperage, range and type (regular or slo blo) in its amperage range. The fuse locks into the holder by means of a bayonet lock which permits easy and quick insertion and removal of fuses.

STANDARD FUSE CLIPS

For the exacting performance often required in the electronics communications, radio, television, aircraft and marine equipment industries, we recommend our beryllium copper fuse clip. Beryllium copper clips have lower contact resistance and higher conductivity than ordinary fuse clips. They are silver plated, a finish well suited to fuse applications.

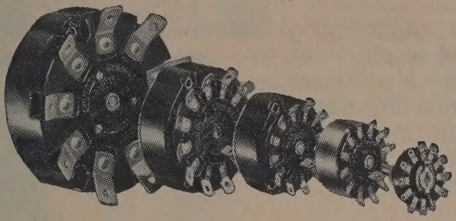
POWER TAP SWITCHES NON-SHORTING TYPE



Each switch is a non-shorting, single pole, rotary, multi-position unit, but switches can be ordered assembled 2 or 3 in tandem (2 maximum, for Model 111) to form multipole assemblies. All ceramic insulation, large, solid silver-to-silver contacts, and "slow-break" action especially designed for alternating current use establish new standards of dependability and performance. Switch shafts are electrically "dead"—insulated by strong ceramic hubs. Contacts and mechanism are entirely enclosed and protected (except for the Model 111).

To assure perfect jaw alignment, pliers must cleanly cut single bond paper strips and snip cotton-covered lamp cord without fraying. Each tool is guaranteed against defects in workmanship and materials.

WORKMANSHIP IN-DUS-TRONIC tools are hot drop-forged from special analysis alloy steel, machined and finished with the same care and precision which have made world-famous BOKER TREE BRAND Fine Cutlery and surgical instruments for over a century. Individually fitted and adjusted, each is accurately heat-treated by HYDRIZING, which minimizes "carburization" and "decarb". Cutting blades are precision-hardened with electronic controls, and honed by hand for keen edges that retain their sharpness.

TECHNICAL ADVANTAGES

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high-grade, water white resin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original resin. Soldered joints made with Ersin Flux do not corrode, even after prolonged exposure to any degree of humidity. It has been tested under climatic conditions ranging from the Arctic to the tropics.

Ersin Flux reduces the surface tension of molten solder causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odors. Non-toxic in use.

Leaves nothing but pure resin on the work after soldering and may be used whenever plain resin is specified.

Complies with all pertinent federal specifications.

Multicore construction. 5 separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder.

Guaranteed continuity of the flux stream prevents dry joints, i.e., those having high electrical resistance.

Although there are 5 cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction, which provides thinner walls of solder, than are found in same gauge single cored solder.

Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

Ersin Multicore Solder is non-toxic in use. Cadmium is completely eliminated. The quantity of antimony is less than government standards allow. There is no danger of harmful effects caused by such impurities.

Every package of Ersin Multicore is labelled with the exact tin/lead content. This precise labelling results from Multicore's precise manufacturing methods.

ERSA CONTROL TRANSFORMER MODELS R30 AND R10

Both transformer models have a primary voltage regulator for 110, 125, 150, 220 and 240 volts. The secondary voltage is also variable within the range of 5 to 6.5 volts, thus making it possible to select a temperature range between 240 to 480°C. When not in use, the ERSA iron rests on a special nozzle provided on the transformer. This protects against overheating.

Control Transformer R10 was solely made for use with the ERSA-MINIATURE Iron Model 10W. The R30, with a greater output, permits universal use of all the various ERSA irons with their different capacities.

PLASTIC HANDLES—(TN-22, TN-33, TN-44, TN-55) are of Tenite II, hex and will not roll off the work bench. Shock-proof, practically unbreakable and will stand rough use on industrial production lines.

METAL HANDLES—(AL-22, AL-33, AL-44, AL-55) are aluminum alloy 4" x ⅜" hex and won't roll off the work bench. Being metal, are NOT SHOCK-PROOF and hence not recommended for ordinary radio-TV service work, especially on a 'live' unit. However, these handles are practically unbreakable and were designed to take rough use on industrial assembly lines and can be used as PRY BARS in lining up components.

METAL ENDS—(separated from each other) non-magnetic stainless steel, to which solder won't adhere. Are firmly seated in handles and are twist-proof.

FORKED END—straddles the wire and with a slight twist, grips it for easy unwinding and removal, or guides it into another lug for soldering. Since plastic handles act as insulation, there is no danger of shock when working on sets in operation. ⅛" forks are made especially for use on printed circuits and transistors.

SPADE END—is a reamer to clean lug holes of solder.

CURVED END—can be used as a scriber for marking chassis. As a circuit tracer when looking for loose connections. As a dial cord stringer. Hook can be bent to a 90 degree angle if desired.

KNIFE & SCRAPER—for cutting and repairing printed circuits.

IRE BRUSH —has approx. 200 bristles of stainless wire .0035 in dia. to which solder will not adhere. For use in cleaning connections before soldering, brushing out splattered solder and in repairing printed circuits.

STAINLESS STEEL WIRE BRUSHES
on steel shaft approximately 2" long overall. Can be used in a regular pin vise. **.33 net**

Prevents harmful effects of excess capillary action of solder along stranded wire beneath insulation. Order tool number by wire size being used.

*"N" Type Tweezers are made for one gauge wire only (not for a range of sizes). Therefore give better fit on wire for greater efficiency. Shorter tip hole provides for close inspection gap on precision soldering such as called for in current NASA specifications.

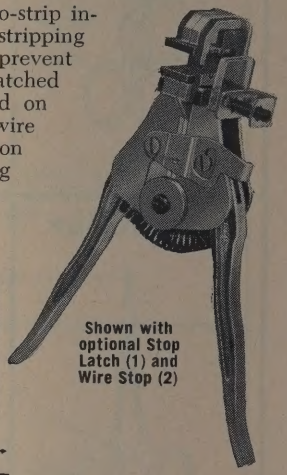
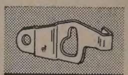
FOR PRECISION WIRE STRIPPING



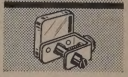
Shown with optional Stop Latch (1) and Wire Stop (2)

Removes Teflon* and other hard-to-strip insulation. New "concentric hole" stripping blades and special design of jaws prevent damage to insulation and wires. Matched sets of blades are precision drilled on watchmaker's equipment to exact wire sizes. Chucking action on insulation guides conductor through stripping hole, preventing nicks and scrapes. 3 models, wire sizes from 10 to 30.

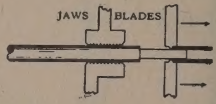
EXTRA FEATURES (optional)



"SHORT-STOP" LATCH protects wire by limiting stroke to 5/32" — disengages without removal for full 7/8" strip.



"SEE-THRU" WIRE STOP assures uniform lengths by adjusting to strip length desired.



Counterbored stripping hole "chucks" insulation

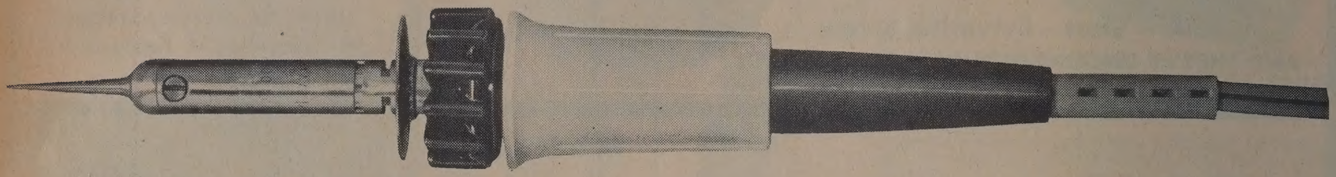
"KWIKIE" TYPE 4000



PENCIL IRONS *(Non-thermostatic)*
7 STANDARD TEMPERATURES AVAILABLE

This newest Kwikie provides unexcelled efficiency and economy with its interchangeable plug-in tips, and unparalleled versatility with its standard irons in wattages and temperatures ranging from 10 watts (450°F) through 50 watts (1000°F). This selection permits easy standardization as well as precise temperatures for exacting production requirements without added cost of transformers.

Small, (7″) lightweight (1¾ oz.) and finely balanced, the new models are provided with a comfortably sized, extra-cool grip of rugged plastic, allowing their use in minimum contamination work areas (no cork). Though designed for prolonged high production precision soldering of miniature components, the Kwikie is small enough for safe fast work in densely packed circuitry with power in reserve. Engineered to melt more solder by comparison with other interchangeable tip type irons of comparable wattage.

All models available with 3 conductor safety-grounded 6′ cord sets and irons in 3 smart colors . . . green, white, and black. All irons and temperatures rate at 115V.

THE ORYX STORY

(Reading time 75 seconds)

FIVE REASONS WHY PRODUCTION MANAGERS CHOOSE ORYX SOLDERING IRONS

1. MINIATURE SIZE

ORYX soldering irons are small and easy to handle as pencils. Their miniature size helps to speed any precision soldering operation. Damage to adjacent components is eliminated. If you can see it, you can solder it with ORYX!

2. FEATHER WEIGHT

A standard, utility-type 100 watt soldering iron weighs about 2 lbs. The so-called pencil-type irons typically weigh between 2 and 6 ounces. ORYX soldering irons, by contrast, weigh as little as ¼ ounce. This true feather weight virtually eliminates hand fatigue. Workers can turn out many more joints per hour with fewer rejects.

3. HIGH EFFICIENCY

All ORYX soldering irons utilize a unique element-in-the-tip design principle. By generating the heat *within* the tip, far fewer watts are needed to achieve results comparable to much larger irons. This principle also provides quicker heat recovery because the heat path between element and joint is so very short. The need for large insulating handles is eliminated.

4. SAFETY

ORYX low-voltage irons are polarized, making it possible to directly ground the shaft, tip, and one side of the heating element. This provides a maximum degree of safety, both to the operator and to delicate circuitry. The ORYX line of 115 V. plug-in models includes 3-wire styles whose shafts and tips may be connected to ground for safety.

5. ECONOMY

A standard ORYX low-voltage industrial iron costs less than $5 in production quantities.

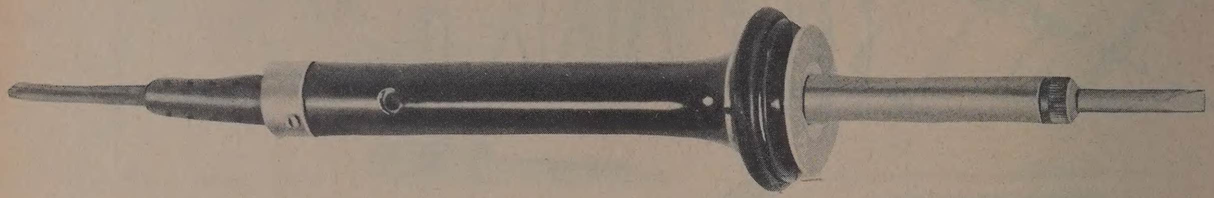
Weller MAGNASTAT® Soldering Irons

for controlled temperature soldering



Here are the only soldering irons with temperature control in the tip. One Magnastat iron with 3 different controlled temperature tips does the work of 3 different irons. And it maintains proper temperature for secure, reliable soldered connections.

- Tip temperature will not vary more than ±3% when idling.
- A Magnastat iron provides efficient soldering temperature under load and excellent recovery.
- Your choice of 3 different controlled temperatures by interchanging Magnastat tips.
- With only half the weight, Weller Magnastat irons do the work of uncontrolled irons of much higher wattage.
- The light weight of a Weller Magnastat iron reduces operator fatigue. Handle remains cool.

Weller DUAL HEAT Soldering Guns

Weller® Expert
UL

Dual heat. All Weller guns offer Dual Heat, an original Weller feature that provides two tip temperatures from the same gun. Two trigger positions permit instant switching to high or low heat, whichever is best suited for the job. The use of low heat prevents damage when soldering near heat-sensitive components and prolongs tip life. High heat is instantly available when needed.

Instant heat. Solders in seconds. No waiting for the tip to heat. No wasted current.

High-Efficiency Tip. Made of copper for superior heat transfer and premium-plated for rigidity and long life. Slips easily into difficult places.

Exclusive Tip Grip. Wiping action of tip fastening nuts eliminates contact resistance and oxidation. This assures full, constant heat.

Spotlight. Illuminates the work and eliminates shadows.

Fingertip control. Heat is instantly "on" when trigger is pulled, instantly "off" when trigger is released. No need to unplug the gun. No danger of damage from an idling hot tool.

Operating comfort. Compact design and perfect balance make precision soldering easy and eliminate fatigue.

Guaranteed one year. All Weller guns are UL and CSA approved, and guaranteed for one year against defects in material and workmanship.

"BLUE CHIP" TRANSFORMERS

62 TYPES
5 DIFFERENT SIZES

Tiny, plastic cased, Blue Chip transformers for printed circuit applications, are available for a wide choice of power ratings.

Five different sizes, from .10 to 1.2 cubic inches with a total of 62 new ratings are listed below to indicate the available power levels for both voice frequency range and extended frequency operation. These ratings take into account not only power handling capacities at minimum frequencies, but also total harmonic distortion under stated conditions. Within the limits shown on the rating charts, variations in both power and distortion levels are possible depending upon the minimum operating frequency.

Blue Chip transformers meet Mil-T-27A, Grade 5, Class S requirements. These versatile transformers are available from ADC, or through your distributor.

POWER TRANSFORMERS *FOR MILITARY AND INDUSTRIAL APPLICATIONS*

Reliability, minimum size and long life under rugged environmental conditions are prime requisites in today's military electronic equipment. To meet these modern standards, ADC offers a complete line of hermetically sealed power transformers. Designed to meet MIL-T-27A specifications and utilizing MIL cases and mounting dimensions, these units offer our customers a ready source for prototype and production applications. All military contractors and commercial electronic engineers with stringent environmental conditions will find these carefully rated units ideally suited. For those applications where hermetic sealing is not necessary, we offer the conservative transformer designs of our hermetically sealed line, in drawn steel cases of MIL size and mounting dimensions with phenolic terminal plates and solder lug terminals.

POWER TRANSFORMERS—60 Cycle

ADC offers these standard power transformer designs to cover a wide range of requirements for electronic circuit application. They are available in standard MIL case sizes, hermetically sealed to meet all requirements of MIL-T-27A, Grade 4, Class R, life expectancy X. Maximum operating altitude is 10,000 feet.

The same electrical ratings are also available as commercial grade fully enclosed units for non-military applications in the same MIL case sizes. This version is furnished with a phenolic terminal board and heavy duty solder lug terminals. Mounting screws and tapped inserts provide the same mounting centers as MIL-T-27A versions.

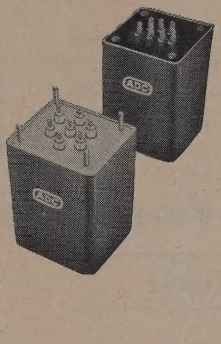
AUDIO TRANSFORMERS *FOR MILITARY AND COMMERCIAL APPLICATIONS*

ADC offers the following designs to cover a wide range of standard audio applications, from low power transistors through heavy duty output circuits. They are conservatively rated at ±½ db from 30 to 15,000 cycles at the maximum rated power. Each is designed for minimum insertion loss, is fully impregnated before potting and rated for dependable continuous duty operation.

These audio transformers are available in standard MIL cases, hermetically sealed to meet all requirements of MIL-T-27A. THE SAME RATINGS ARE ALSO AVAILABLE AS COMMERCIAL GRADE COMPONENTS, featuring the lower cost construction of a phenolic terminal board with solder lug terminals in the same drawn MIL cases.



INPUT TRANSFORMERS Response ±½ db, 30-15,000 cps

MILITARY STANDARD AUDIO TRANSFORMERS

These Military Standard audio transformers have been specified by ASESA and are established by the three Military Services and the transformer industry as standards for Military transformer applications. Tests have been conducted in ADC's environmental laboratory which indicate that these units will meet the requirements of MIL-T-27A, Grade 1, Class R operating temperature, life expectancy X (10,000 hours minimum).

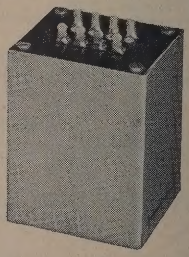
ADC REPEATING COILS



104A—Cord Circuit. This repeating coil is designed to have good transmission efficiency for voice frequencies. Low frequency ringing currents are attenuated and circuit will not ring through. Case is heavy steel to eliminate all crosstalk. Core will not saturate at maximum normal current.

104B—Phantom. The 104B Repeating Coil is a 4-winding coil, for use in phantom circuits. The phantom winding (5-6-7-8) is parallel wound. Heavy Formvar wire is used for maximum surge voltage or lightning protection. This coil has good transmission efficiency at both ringing and voice frequencies.

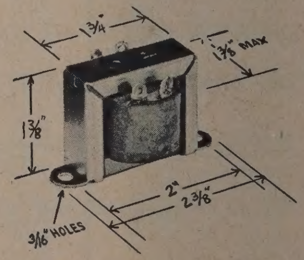
INDUCTION COILS



103A—Induction Coil is a 2-winding coil for local battery telephones.

103B—Anti-Sidetone Induction Coil is similar to 103A, but with an additional winding for anti-sidetone connection.

103C—Anti-Sidetone Induction Coil is designed for common battery telephone use.

HST TRANSFORMERS

TYPE TT

MINIATURIZED TRANSISTOR TRANSFORMERS

MIL-T-27A, CLASS R GRADE 5 SPECIFICATION

The HST line of type "TT" Transistor Transformers is the most complete available.

Standard types cover practically all applications: interstage, output, output to line, input, single or push-pull output, reactors, mixing and matching. All designs can be used reversed, input to secondary. The "TT" Series are vacuum molded in green epoxy resin with schematic diagrams and transformer parameters permanently and legibly marked on all units.

Standard 0.10" spacing is used on terminal leads. No bulky clamps are required for mounting, saving valuable board area.

All "TT" Transformers have been tested to the requirements of MIL-T-27A, Class R, Grade 5 specifications. Reliability of operation is insured by continuous reassurance testing. The meticulous plant conditions under which the "TT" series is manufactured insure the maximum quality obtainable. A magnetic shield is available for all TT units. The TT-101 Shield offers approximately 20 db of attenuation. The shield is designed to "snap-lock" onto the unit, or in addition, can be permanently cemented with a drop of epoxy resin.
